## STATISTICS OF STATE COMMON-SCHOOL SYSTEMS.

|  |         |
|--|---------|
| Table 1.—Total population, school population, adult male population.....   | XXXV    |
| Table 2.—Relation of school population to total population and to the adult male population; proportion of white school population of foreign birth; percentage of foreign born of total population..... | XXXVI   |
| Table 3.—School ages of the several States; State school censuses.....   | XXXVII  |
| Table 4.—Number of pupils enrolled in the common schools at various periods, and relation of enrollment to school population.....  | XXXVIII |
| Table 5.—School enrollment of 1894-95, classified by sex.....  | XXXIX   |
| Table 6.—Per cent of school population enrolled in the public schools, for a period of years..   | XL      |
| Table 7.—Average daily attendance at various periods, and its relation to enrollment.....  | XLI     |
| Table 8.—Average length of school term at various periods; aggregate number of days' schooling given to all pupils.....  | XLII    |
| Observations on Table 8.....   | XLIII   |
| Table 9.—Length of school term; average number of days' schooling given each child.....  | XLIV    |
| Table 10.—Number and sex of teachers; proportion of male teachers.....   | XLIV    |
| Table 11.—Showing, for a period of years, what per cent of the whole number of teachers are males.....   | XLV     |
| Table 12.—Average monthly salaries of teachers.....  | XLVI    |
| Table 13.—Schoolhouses and school property.....  | XLVII   |
| Table 14.—Private schools.....   | XLVIII  |
| Relative growth of public and private schools.....   | XLVIII  |
| Table 15.—Receipts of school moneys.....   | LI      |

|  | Page |
|--|------|
| Table 16.—School revenue compared (1) with the adult male population, and (2) with the school population. Percentage analysis of the school revenue..... | LIII |
| Table 17.—Progress of school expenditure.....  | LIV  |
| Table 18.—The school expenditure classified.....   | LV   |
| Table 19.—Expenditure per pupil; percentage analysis of expenditure.....   | LVI  |
| Table 20.—School expenditure per capita of population; same per capita of average attendance.....  | LVII |

## PART I.

### CHAPTER I.—CITY SCHOOL SYSTEMS.

|   |    |
|---|----|
| Progressive increase in city school statistics .....  | 3  |
| Cities of 8,000 inhabitants or more in 1790, 1820, 1840, and 1850, with population of same cities in 1890.....                            | 9  |
| Summary of statistics of school systems of cities containing over 8,000 inhabitants, showing increase or decrease from previous year..... | 12 |
| Summary of enrollment, attendance, supervising officers, and teachers .....   | 14 |
| Summary of school property and expenditures .....   | 15 |
| Comparative statistics of city schools.....   | 16 |

### CHAPTER II.—STATISTICAL REVIEW OF SECONDARY SCHOOLS.

|   |    |
|---|----|
| General statistics of secondary schools .....                   | 19 |
| Public high schools.....  | 20 |
| Students and studies .....                                      | 23 |
| Equipment and income .....                                      | 25 |
| Private high schools.....                                       | 26 |
| Denominational schools.....                                     | 28 |
| The endowed academies .....                                     | 32 |
| Summary of statistics of public high schools.....               | 36 |
| Summary of statistics of private secondary schools.....         | 48 |
| Review of public high school statistics from 1890 to 1895 ..... | 72 |
| Review of private high school statistics from 1890 to 1895..... | 89 |

### CHAPTER III.—STATISTICAL REVIEW OF NORMAL SCHOOLS.

|   |     |
|---|-----|
| General summary.....  | 107 |
| Distribution of normal students .....   | 110 |
| Normal students in colleges and universities .....  | 110 |
| Colleges and universities reporting students in teachers' training course .....           | 111 |
| Synopsis of courses in departments of pedagogy in certain universities and colleges ..... | 118 |
| Summary of statistics of public normal schools .....                                      | 128 |
| Summary of statistics of private normal schools.....                                      | 134 |
| Comparative statistics of public normal schools from 1890 to 1895 .....                   | 143 |

### CHAPTER IV.—STATISTICAL REVIEW OF HIGHER EDUCATION.

|  |     |
|--|-----|
| Universities and colleges .....  | 149 |
| Number of universities and colleges controlled by the several religious denominations.....       | 153 |
| Summary of statistics of coeducational universities and colleges and in colleges for men only... | 155 |
| Summary of degrees conferred on men by universities and colleges.....                            | 164 |
| Degrees conferred on women by coeducational universities and colleges.....                       | 166 |
| Property held by universities and colleges.....  | 168 |
| Income of universities and colleges .....  | 169 |
| Colleges for women, Division A.....  | 169 |
| Colleges for women, Division B.....  | 170 |
| Schools of technology.....   | 178 |
| Comparative statistics of higher education from 1890 to 1895.....                                | 184 |

### CHAPTER V.—STATISTICAL REVIEW OF PROFESSIONAL SCHOOLS.

|   |     |
|---|-----|
| General summary of statistics of professional and allied schools .....                                    | 235 |
| Summary of statistics of schools of theology .....  | 236 |
| Summary of statistics of schools of law .....   | 237 |
| Summary of statistics of schools of medicine, dentistry, pharmacy, and for nurses and veterinarians ..... | 238 |
| Comparative statistics of professional and allied schools from 1890 to 1895.....                          | 242 |

CHAPTER VI.—THE EDUCATIONAL SYSTEMS OF ENGLAND AND SCOTLAND, WITH STATISTICS FOR 1893-94.

Page.

|   |     |
|---|-----|
| General educational statistics .....  | 257 |
| Elementary education .....  | 259 |
| Finances .....  | 262 |
| Recent movements relative to religious instruction and to public support for denominational schools ..... | 263 |

CHAPTER VII.—MANITOBA SCHOOL CASE.

|  |     |
|--|-----|
| Introductory statement .....   | 275 |
| The Present Issue. By Henry R. Alley, secretary to the minister of education for the Province of Ontario ..... | 279 |

CHAPTER VIII.—EDUCATION IN FRANCE.

|   |     |
|---|-----|
| General features of the educational system .....                                    | 289 |
| Recent modification in the department of secondary instruction .....                | 291 |
| Recent development of the faculties (universities) .....                            | 292 |
| Progress of the system of primary education .....                                   | 294 |
| Subjects and courses of instruction .....   | 296 |
| Schools for adults .....  | 298 |
| Summary of proceedings of the Educational Congress at Havre in 1895 .....           | 303 |
| Movement for the admission of American students to the universities of France ..... | 305 |

CHAPTER IX.—PUBLIC EDUCATION IN BELGIUM.

|                                |     |
|--------------------------------|-----|
| Brief view of the system ..... | 313 |
| School law of 1895 .....       | 315 |

CHAPTER X.—EDUCATION IN CENTRAL EUROPE.

|  |     |
|--|-----|
| List of articles on education in central Europe, published in previous reports .....                 | 321 |
| "The new education in Germany."—Translation of an essay by Prof. W. Rein .....                       | 322 |
| "Is German education in a state of decomposition?"—Translation of an article by Dr. Fr. Dittes ..... | 329 |
| Supplementary and industrial schools in Germany .....  | 345 |
| Rural or ungraded schools in Germany .....   | 360 |
| German opinions on the Bell-Lancaster method of mutual instruction .....                             | 403 |
| Courses of study for public elementary schools in central Europe .....                               | 406 |
| Normal schools in Switzerland .....  | 426 |
| Mental fatigue in school .....   | 449 |
| National features of female education .....  | 469 |
| Public instruction in the Grand Duchy of Luxemburg .....   | 471 |

CHAPTER XI.—EDUCATION IN THE NETHERLANDS.

|   |     |
|---|-----|
| Classification of schools .....                                 | 475 |
| Historical sketch .....   | 477 |
| Superintendence of primary schools .....                        | 486 |
| Repetition schools .....  | 489 |
| Income and expenditures .....                                   | 500 |
| The normal schools .....  | 502 |

# REPORT OF THE COMMISSIONER OF EDUCATION.

---

DEPARTMENT OF THE INTERIOR,  
BUREAU OF EDUCATION,  
*Washington, D. C., May 1, 1896.*

SIR: I have the honor to submit herewith my seventh annual report, the same being for the year ending June 30, 1895.

## WHOLE NUMBER ENROLLED IN SCHOOLS AND COLLEGES.

There were enrolled in the schools and colleges, public and private, of the United States during the school year 1894-95, 15,688,622 pupils, being an increase of 158,354 over the previous year. A detailed classification of these pupils is given on pages XI and XII, showing the number in the elementary schools, in the secondary schools and in the various institutions for higher education.

The number in schools supported by public funds and taxation was 14,280,070; the number in private institutions, 1,408,552.

In addition there were some 400,000 persons enrolled in various special schools and institutions such as business colleges, trade schools, conservatories of music, schools of art and elocution, schools for delinquent and for defective classes, Indian schools, evening schools, etc., making a grand total of about 16,100,000 persons who attended a school of some kind for a longer or shorter period during the year.

## THE COMMON SCHOOLS.

The term "common schools" is used by this office to include public elementary and secondary day schools. The following table gives a condensed summary of the common-school statistics compiled from data furnished this office by the State superintendents. The returns are to be found in detail on pages XXXV and LVII. The corresponding figures for the school year 1893-94 are given in a parallel column in order to facilitate comparison. It will be seen that the increase for the year is 265,775 pupils.

*a* Including pupils in preparatory or academic departments of higher institutions, public and private, and excluding elementary pupils, who are classed in columns 2 and 3.  
*b* This is made up chiefly from the returns of individual high schools to the Bureau, and is considerably too small, as there are a great many secondary pupils outside the completely organized high schools whom there are no means of enumerating.

*c* Including colleges for women, agricultural and mechanical (land-grant) colleges, and scientific schools. Students in law, theological, and medical departments are excluded, being tabulated in columns 9-11. Students in academic and preparatory departments are also excluded, being tabulated in columns 4 and 5.  
*d* Mainly State universities and agricultural and mechanical colleges.

*e* Including veterinary and nurses' training schools.  
*f* Mainly in schools or departments of medicine and law attached to State universities.

*g* Nonprofessional pupils in normal schools are included in columns 4 and 5.  
*h* Private normal schools are, with few exceptions, scarcely superior to the ordinary secondary schools.

*i* There are, in addition to this number, 22,335 students taking normal courses in universities, colleges, and high schools. (See p. 141 of this report.)

Total number of pupils and students of all grades in both public and private schools, 1894-95—Continued.

In my last report I commented on the extraordinary increase in enrollment shown by the returns for 1893-94—an increase of 425,258 in the public elementary and secondary schools, and the largest increase for any one year ever recorded in the nation. It was explained that this gain occurred during a wide spread business depression, and that it indicated the wise endeavor on the part of the people to make up for the loss occasioned by irregular and uncertain wages by sending to school not only the younger children, but also their older children, temporarily thrown out of occupation as wage earners.

The percentage of the total population enrolled in the public schools was 20.65, as compared with 20.53 of the previous year—a slight increase over that year. This percentage of school pupils has increased from 19.67 in 1879-80. There are, it would appear, in every 10,000 persons 98 more enrolled in school than in 1880.

It is noticeable that the average number of days in the school year has increased slightly, namely, 141.4 compared with 139 of last year. This is the largest average ever reached in this country. There has been also, it would appear, a slight increase of monthly wages for the teachers. In the following tables I show the increase of amount of schooling afforded each citizen in the several parts of the country. The first table includes the amount of schooling given in both private and public schools, and the second the amount given in the public schools only. This is a very interesting table, as it shows at a glance the net result of the entire school system of the country. It would appear that at the rate of attendance on the schools the past year the entire population is receiving an average of  $4\frac{3}{4}$  years of 200 days each. This is certainly not a very large amount, but in the comparative table it will be seen that there has been a very considerable increase since 1870, when the total amount of schooling received in public and private schools was only 3.32 years of 200 days each. It is of interest to name the eight States that lead in the matter of average amount of education: Massachusetts furnishes 8.04 years per inhabitant; Connecticut, 7.31 years; New York, 6.83 years; Rhode Island, 6.76 years; Ohio, 6.59 years; Iowa, 6.33 years; Illinois and New Jersey, 6.29 years.

A calculation of the amount received in the schools of the German Empire shows that the entire population was receiving in 1893 an average of 7.2 years of 200 days each. It should be mentioned that this item includes only the amount given in the elementary schools. It should be slightly increased to include secondary instruction and instruction in the universities.

*Average total amount of schooling (including all grades, both public and private) each individual of the population would receive under the conditions actually existing at the different dates given below.*

[Expressed in years of 200 school days each.]

#### CITY SCHOOL SYSTEMS.

The consolidated statistics of 574 city school systems are included in Chapter I, pages 14 to 17; the statistics of the individual city systems are given in Part III. Since villages are constantly growing into cities the list increases from year to year. This increase should be borne in mind in making comparison of the present with former years. It is understood that with the growth of cities there is an improvement in the schools. From the unclassified school, wherein the teacher receives all grades of pupils from *a b c's* to algebra, the village makes progress to the graded school or union school, wherein pupils are classified and separate teachers provided for each grade. Longer time may be given to the work of the recitation in the graded school and the pupil taught how to study his lesson, and how to overcome its difficulties. From the village to the city there is continual progress in grading and classification. In Table No. 5, page 16, the ratio of attendance on public schools compared with private and parochial schools is shown.

#### SECONDARY SCHOOLS.

The tables given in Chapter II, showing the attendance on public high schools and private academies and seminaries so far as secondary instruction is concerned, show 22,681 teachers instructing 468,446 pupils in the 6,892 schools of this grade; 4,712 of these are public high schools and 2,180 are private academies or seminaries. It is interesting to note

that 17 per cent, or one-sixth of the pupils, were preparing for college. Nearly one-half of all these pupils were studying Latin, and about one-twentieth of the number were studying Greek. The circulars of inquiry sent out from this Bureau requested a specification of the studies which the pupils returned as secondary were pursuing. A list of these secondary studies will be found in Chapter II (pp. 23-25). In the comparative table, page 20, showing the records of secondary pupils for several years, there will be found great discrepancies, due in part to the change on the part of this Bureau of its definition of the term "secondary instruction." Formerly the Bureau accepted the classification as made by the several schools, and in many cases pupils in elementary studies were reported as secondary pupils for no other reason apparently than because they attended the building in which secondary instruction was conducted. By degrees this Bureau has been able to sift out the elementary pupils from the secondary pupils in the returns, and now offers a much more accurate exhibit of secondary work in the country than formerly. But it must be confessed that the secondary schools proper do not contain all of the pupils receiving secondary instruction. Just as many secondary schools, so called, contain elementary pupils, so some elementary schools give secondary instruction to individuals and even to classes. This is carried on to a greater extent in the Southern and Western States than in the North Atlantic and North Central States. What addition should be made to the figures here reported, to include all such secondary pupils, it is hazardous to estimate, but probably the number would fall much below 10 per cent of the entire number reported in the tables.

## NORMAL SCHOOLS.

In Chapter III (pp. 107-148) the consolidated statistics of normal schools are given. There were 80,839 students in the country pursuing training courses for teachers. Of this number perhaps 12,000 per annum may be counted as graduates. To supply the places made vacant in a corps of teachers of 400,000, besides filling the positions in new schools opened during the year, upward of 60,000 teachers are required. Hence the supply from the professional schools is sufficient only to furnish one-fifth of the teachers demanded. But it must be remembered that professionally trained teachers remain in the work of teaching much longer than the persons who take up the work as a makeshift; hence out of the 400,000 teachers employed in the United States there is a much larger proportion of the former than the supply from normal schools would seem to indicate. In some States the number of teachers professionally trained exceeds 50 per cent of the entire number.

Another table gives the names of the universities and colleges in which training courses for teachers are provided. Their number has increased from 114 colleges in 1890, with an enrollment of 3,414 students in the normal department, to 192 in 1895, with 6,402 normal students.

Twenty-seven universities have regularly organized departments of pedagogy, and offer professional training of a high character in courses of study extending over four years and leading to degrees of pedagogy. In Chapter III will be found an interesting table outlining the course of pedagogy offered in each of the twenty-seven institutions.

#### HIGHER EDUCATION.

*Universities and colleges* (pp. 149-169).—The total number of universities and colleges for men and for both sexes reporting to this office during the year was 481, each State and Territory being represented by at least one institution. The number of instructors reported by these institutions was 11,582, while the number of students of all classes was 149,939. Of the latter number 46,098 were enrolled in preparatory departments, 63,402 in collegiate departments, 4,273 in graduate departments, and 23,567 in professional departments. The property reported was as follows: Volumes in libraries, 6,092,673; value of material equipment, \$129,025,653; productive funds, \$102,574,808. The benefactions amounted to \$5,350,963, and the total income, excluding benefactions, was \$16,783,638.

*Colleges for women* (pp. 169-177).—The 163 colleges for women had, in 1894-95, 2,425 instructors and 24,193 students. The material equipment was valued at \$15,919,990, and the endowment funds at \$5,172,767. The income was \$3,441,158, and the benefactions \$625,734.

*Schools of technology* (pp. 178-184).—The number of schools of technology, excluding technological departments of universities and colleges, was 51, having 1,217 instructors and 13,896 students. The material equipment was valued at \$15,522,676, and the productive funds at \$13,609,529. The income of these institutions was \$3,965,593, and the benefactions \$21,530.

*Professional schools* (pp. 235-255).—There were 149 schools of theology, with 906 professors, 8,050 students, and 1,598 graduates in 1894-95. During five years theological schools only increased by 7 and theological students by 700. More than three-fourths of the students were in the North Central and North Atlantic divisions. In the Western division there were only 80 theological students, the small number being attributable to the fact that the various denominations had already established theological schools in the older and more eastern States.

Law schools numbered 72—not quite half as many as theological; but while theological schools increased only 7, law schools increased 18 in number in five years; and while theological students increased only about 700 in number, law students increased 3,700. The number of law students was 8,950, and the number of graduates 2,717.

The address of Justice David J. Brewer, of the United States Supreme Court, before the American Bar Association, on "A better education the great need of the profession," is given in full, and

presents in a vivid manner the great influence of the legal profession in shaping the policy and determining the destiny of American institutions, and consequently the importance of a bar with liberal culture, professional honor, and the highest legal attainment.

Medical schools numbered 151, of which 113 were regular, 20 homeopathic, 9 eclectic, 2 physiomedical, and 7 graduate. Medical students number more than twice those in either law or theology, viz, 22,887, of whom 18,660 were in regular schools, 1,875 in homeopathic, and 732 in eclectic. Notwithstanding the lengthening of the medical course to three years, and afterwards to four years in many schools, and notwithstanding the rigid medical practice requirements already adopted in many States and still being adopted in others, the number of students has constantly increased in both regular and homeopathic colleges. The educational qualifications demanded of prospective physicians instead of affrighting students seem only to have enhanced their appreciation of a medical diploma and of a State license.

Schools of dentistry numbered 45, and dental students 5,347, more than 2,000 over the number attending five years before. While the adoption of a three years' course in dentistry did not diminish the number of students, it has diminished the number of graduates, the number in 1894-95 being practically the same as the number four years before.

Schools of pharmacy numbered 39, with 3,859 students, about 1,000 more than five years before.

Schools for the training of nurses numbered 131, while the number in 1890-91 was only 34. In fact, the nurse training school is comparatively a new institution. It was not many years ago when one of the largest hospitals in New York City found it necessary to advertise for what at that time even was considered a competent nurse. In the Southern and far Western States trained nurses are even at this time uncommon. In the South Atlantic Division, in 1894-95, there were only 11 training schools, and most of these were in the border cities—Washington and Baltimore. In the South Central Division there was only 1, and in the Western only 3. New schools are rapidly being organized, however, as is indicated by the addition of about 25 new names to the list since the table in this report was compiled.

## GREAT BRITAIN AND IRELAND.

Two events of unusual importance have occurred in England during the scholastic year 1894-95. One of these is the revival of the question of religious instruction in board or public elementary schools, and in general the relation of the State to denominational or parochial schools; the other is the publication of the report of the Royal Commission on secondary education. The question of religious instruction was unexpectedly revived in the London School Board just before the crisis that brought the conservative party again into control of the Government. As this party had made pledges to secure favorable legislation for

Twenty-seven universities have regularly organized departments of pedagogy, and offer professional training of a high character in courses of study extending over four years and leading to degrees of pedagogy. In Chapter III will be found an interesting table outlining the course of pedagogy offered in each of the twenty-seven institutions.

## GREAT BRITAIN AND IRELAND.

Two events of unusual importance have occurred in England during the scholastic year 1894-95. One of these is the revival of the question of religious instruction in board or public elementary schools, and in general the relation of the State to denominational or parochial schools; the other is the publication of the report of the Royal Commission on secondary education. The question of religious instruction was unexpectedly revived in the London School Board just before the crisis that brought the conservative party again into control of the Government. As this party had made pledges to secure favorable legislation for

denominational schools, the agitation in the metropolis became part of a controversy which has extended over the whole country. An important principle is involved in the effort to secure increased public aid for schools under private management, namely, that of the application of public funds where public control can not follow. A large proportion of the English people are opposed to such a policy, and even extreme advocates of denominational schools realize that it is dangerous to provoke this contest. The outcome of the controversy can not be foreseen at this date. The events which have marked its inception and progress, as set forth in Chapter VI (pp. 257-273), are full of significance.

The growing activity of the State in educational matters is not only shown in its influence as an organizing power, but in the increase of appropriations from the public treasury. In a little less than two decades the Government grant to elementary schools in England has increased by nearly 300 per cent, and in Scotland in fourteen years by about 120 per cent. From this grant in 1894-95 was derived 67 per cent of the income for elementary schools in England and 73 per cent in Scotland. These estimates include the grant in lieu of fees allowed under laws of 1890 and 1891, and amounting to about one-third of the entire appropriation. Local taxes provide about one-fifth the income of elementary schools in England, and a little more than one-fifth in Scotland, leaving but a small balance in either division to be met from fees and voluntary subscriptions. The increase in enrollment in England far exceeds that in population. It is evident, indeed, that the purpose of the school law of 1870 to bring all the children of the country under school influences has been realized.

The total enrollment in England, 5,235,887, was equivalent to 17 per cent of the population; in Scotland, where the enrollment was 699,716, the ratio was slightly smaller, i. e., 16.6 per cent.

The enrollment in England was distributed as follows: Board schools, 42 per cent; Church of England schools, 44 per cent; Wesleyan schools, 3 per cent; Roman Catholic schools, 5 per cent, and British undenominational and other schools, 5.8 per cent.

The detailed statistics presented in Chapter VI illustrate the progress of the elementary school system in other particulars, notably the increase in the number of adult and certificated teachers, the development of night schools and the success of measures for freeing elementary education from mechanical routine.

#### THE MANITOBA SCHOOL QUESTION.

Chapter VII (pp. 275-288) presents a dispassionate statement of the legal aspects of the Manitoba school case, for which the office is indebted to Mr. Henry R. Alley, secretary to the minister of education for the Province of Ontario.

The principal events which have marked the progress of the case

since this statement was closed are added, and an introduction which sets forth in brief the peculiar local conditions that have to be met in the practical endeavor to establish and maintain schools. A feature of special interest to us is the mixture of peoples and of languages that are comprised in the sparse population of this border Province.

Here, also, as in our newly settled States, the difficulty of securing competent teachers is one of the most serious with which school authorities have to deal. Manitoba has shown a disposition to follow the precedent of Ontario in respect to provision for the training of teachers. The allowance for teachers' salaries is augmented by legislative and municipal grants—the former, \$130; the latter, from \$200 to \$400 annually for each teacher. With all wise provisions, the existing obstacles to an adequate supply of competent teachers are not overcome. The Rev. Principal Grant, of Queen's College and University, Kingston, Ontario, has given a graphic picture of these conditions in his report of a recent tour of investigation through the Province. Citations from the report serve to emphasize the indications of the official statistics presented in the introduction.

#### EDUCATION IN FRANCE.

Chapter VIII (pp. 289–312) presents the latest published statistics of education in France, which show for elementary schools a slight decline in enrollment during the five years 1887 to 1892. This decline, it may be observed, is not entirely accounted for by the decrease in population, since in 1886–87 there were 1,446 pupils for every 10,000 inhabitants, whereas in 1891–92 the corresponding number had fallen to 1,434. The number of teachers has increased by 8,019, or 6 per cent, during the half decade, and the total expenditure for elementary education in the same time by 7½ per cent. The State having assumed the payment of teachers' salaries, bore 84 per cent of the total expenditure in 1892, as against 48.9 per cent in 1887.

In the department of higher education the work of developing and reorganizing university courses continues. During the present year the doctorate of law has been constituted in two forms, i. e., the doctorate of legal science, and the doctorate of political and economic science. The course in law has been correspondingly divided. Moreover, the elective principle has been admitted to a slight degree in each course. Thus efforts dating as far back as 1789 to secure State recognition for studies relating particularly to the demands of modern society have been brought to a successful close.

The most important recent movement pertaining to popular education is that for the instruction of adults. Schools and classes for adults have been maintained, either by church or state or private agencies, for nearly two centuries. The present Government fostered these enterprises for a while as a means of overcoming illiteracy, but as elementary education spread this particular need passed away, and classes

for adults declined. The movement for their revival which has suddenly engaged attention has a different end in view.

The belief that crime is increasing among the youth of France is widespread, and the tendency is recognized as a grave peril to the State. One cause of this evil is found in the lack of restraints during the susceptible and wayward years of adolescence. It is chiefly as a means of building up character and of developing an interest in useful pursuits that provision for continued education is urged. Private societies are leading the work, which has also the full support of Government.

Chapter VIII presents also a survey of the movement for the admission of American students to French universities. Through the efforts of Prof. H. Furber, of Chicago, and the cooperation of leading university men in France, a Franco-American committee has been formed to devise practical measures for bringing the university honors of France within the reach of students from this country. An American advisory committee has also been formed, under the presidency of Prof. Simon Newcomb, whose counsels will have great weight in determining the concessions that shall be made in the interests of our students. Already a measure has been secured which enables students from the United States to enter the faculty of sciences as candidates for the degree of licentiate on the basis of their American diplomas. After this degree is attained, the doctor's degree may be secured on substantially the same terms as in Germany.

#### BELGIUM.

The passage of a new school law for Belgium is one of the most notable events of the year. Religion, which under the liberal law of 1879 was excluded from the programmes, was restored by the conservatives as an optional branch in 1884, and now, under the new law bearing date September 15, 1895, is made obligatory in all elementary schools. Moreover the subject is confided to the care of the clergy of the several denominations, who must give the instruction or designate the proper person for the duty. The law encounters great opposition in the cities and its effects will be followed with deep interest in all countries.

The chief provisions of the law are cited in Chapter IX (pp. 313-319), which comprises also a brief view of the educational system of Belgium, with statistics showing its progress and present status.

#### EDUCATION IN CENTRAL EUROPE.

Chapter X (pp. 321-470) contains, under the caption "Education in central Europe," first, a translation of Prof. W. Rein's article on "The new education in Germany," which sets forth the chief features of Herbart's system as advocated by his disciples at the present day. Professor Rein succeeded Professor Stoy at the university of Jena, and is considered an authority on education, according to Herbart.

A translation of an article by Dr. Fr. Dittes, of Vienna (formerly

school councilor in Gotha and president of the City Normal College of Vienna), who writes under the caption "Is German pedagogy in a state of decomposition?" shows the other side of the question as seen in Germany.

The account of the Berlin city school system contained in last year's annual report is continued in this volume by a statement of supplementary and industrial schools in Germany, especially in Berlin. These schools are a feature of the German educational system with which the American public is not very familiar. The only element of our system that may be compared with them is found in our city evening schools.

The German school authorities endeavor to prepare for skilled labor and thus increase the productiveness of their sources of wealth. The value of the account is enhanced by the addition of extracts from reports sent to the State Department by the consul-general of the United States and courteously loaned to the Department of the Interior.

The question of how to improve the rural schools, at present much discussed by teachers in this country, has suggested a presentation of the status of rural schools in Germany, their organization, course of study, methods of teaching, and means of instruction. The monitorial system of teaching has been suggested as containing hints for methods of instruction. The article in this report on "Rural and ungraded schools in Germany" contains a statement of the value and the mode of application of the so-called Bell-Lancaster system of employing pupil teachers or utilizing advanced pupils in keeping school or hearing lessons. The advantages and defects of this system are shown in an additional chapter containing authoritative expressions of German educators on this system.

Another interesting subject under discussion in educational gatherings is the course of study for elementary schools. The action of the National Educational Association in this direction was sketched in last year's report. The problem of finding the relative value of studies has of late agitated the minds of German teachers as well, as is seen from an inquiry into the courses prescribed in sixteen German cities, here given in an English translation. The relative value of the various branches of instruction is expressed in the numbers of lessons assigned to them. This, of course, does not consider the personal element, the teacher, nor should that element be considered in this connection. Mr. J. Tews, of Berlin, collected these courses and presented them in a comparative table to the readers of the *Paedagogische Zeitung* (Berlin).

The annual report for 1891-92 contained a statement of the history and methods of training teachers in central Europe, in which the normal schools of Switzerland were duly mentioned, but not described. The present chapter treats of them more fully and enters into detail. The Swiss school system, like ours, is not a federal system, but is established, maintained, and regulated by the separate States, called Cantons in Switzerland.

The eighth part of this chapter is devoted to an account of the animated discussion of "Mental fatigue in school," going on at present in Germany. It has been claimed that secondary schools in Germany are overworking their pupils. Representatives of the science of hygiene, feeling themselves called upon to substantiate these charges, subjected some schools to a rigid test. Noted professors, such as Burgerstein in Vienna, Hoepfner in Berlin, Kraepelin in Heidelberg, Richter in Halle, and others, are made to contribute to this symposium with excerpts from their publications, which are based upon actual tests made in school. The burden of argument in defense of the school is borne by Professor Richter, who published his impressive deductions from the results of tests in a periodical, entitled *Lehrproben und Lehrgaenge*. The problem is not yet solved, since few of the contributors to the discussion seem to take into consideration the climatic effects, locality of the school and home, and individual predisposition of the pupils.

Another contribution to this chapter consists of a translation of Prof. Stephan Waetzoldt's paper, entitled "National features of female education," in which he states that he who has accustomed himself to understand historically that which exists in the education of a people, and compares it with the work and the results of other nations upon similar lines, will not be apt to believe in the possibility or utility of borrowing by one nation from another without extensive modifications and adaptations; every educator will try to understand and to explain, but will refrain from copying, for in the end every nation finds that which is best adapted to its needs, and finds it in its own way. This truth he proves by showing how the types of woman's education have developed in France, Germany, England, and the United States. His valuable criticism of American education already published (in translation) in the annual report of this Bureau for 1892-93 has created a timely interest in the present article. The fact that Professor Waetzoldt's article appears in the official organ of the Prussian minister of public instruction indicates the weight that the Government gives to the author's opinion.

#### TEACHERS' PENSIONS.

There has also been prepared for this report a chapter on teachers' pensions and annuities (Chapter XX.) This is, at present, a question which is agitating teachers and legislators. In order to show what has been done in this line, a statement of the laws and regulations in force in this country is offered, together with the *modus operandi* of independent efforts on the part of teachers' annuity societies. It may astonish the adherent of the so-called American maxim, "no pensions for civil officers," to notice how often this principle has been set aside in recent times by State laws and municipal ordinances. To teachers who desire information as to how to proceed in framing constitutions and by-laws of annuity societies, and who may wish to submit bills for pension laws, the present chapter may be serviceable. It is noticeable that

in the city of New York the fractions of salary forfeited by teachers or other school employees, owing to absence from duty, together with 1 per cent of all the salaries, which is retained for the purpose, are sufficient to create a fund for the retirement of old or incapacitated teachers, which fund has assumed considerable proportions—about \$65,000.

#### THE NETHERLANDS.

In Chapter XI (pp. 475-542) the specialist discusses education in the Netherlands and commences with a brief historical introduction, tracing the rise of education in that country. Many statistics are presented showing the number and kinds of primary and secondary schools, the number of pupils of each sex attending, the cost and sources of revenue, whether from the treasuries of the communes and provinces or the general treasury of the State. The specialist has also compared the attendance and cost of these schools in 1889-90 and in 1893-94, showing in most cases a gratifying increase in school facilities. Brief statements on the organization, apparatus, and courses in the universities, with statistics of attendance, are added.

#### EDUCATION IN ITALY.

The chapter on education in Italy (pp. 543-582) includes comparative statistical tables by Dr. Egisto Rossi, author of a work on public instruction in the United States. It also contains a reprint of an article on the Catholic schools of Rome by His Eminence Cardinal Satolli, and university statistics for 1894-95 by Professor Ferraris, of the University of Padua. The status of the schools of Leghorn in 1893 and the scientific and professional associations of Rome are presented by recent members of our consular service.<sup>1</sup> These are followed by a résumé of current educational movements to date of 1895, and by historical data which give the different phases of educational progress.

In the thesis of Dr. Rossi the growth of infant schools is indicated. In 1862 there were 1,673, with 71,054 pupils, which increased to 2,296 in 1890, with 278,204 pupils. The elementary schools had 885,152 enrolled in 1862 and 2,188,930 in 1890. The interest in education manifested by the working classes is indicated by the fact that 100,002 persons were in attendance in the holiday schools in 1890, compared with 16,031 in 1862; evening schools, 108,170 students in 1862 to 196,846 in 1890. There are to-day five times as many students preparing in normal schools for the teacher's profession as were found in 1862. State secondary schools (*Ginnasi* and *Licei*) have fully three times as many students as in the sixties; State technical schools, nine times as many students—2,200 in 1862 to 19,219 in 1890 (in 1893 there were 21,833 students). Students in State technical institutes and in schools fitting for the merchant marine increased fivefold in these years. In

<sup>1</sup>Furnished this office by the Bureau of Statistics of the Department of State (See pp. 564, 576.)

university studies there were about 11,063 students in 1866-67; in 1894-95 Professor Ferraris points out that there were 23,140 students pursuing university courses, over 21,000 being in the faculties, 1,359 in the annexed schools for engineering, 577 in veterinary schools, and 172 in schools of agriculture annexed to the universities.

The supreme control of the Catholic schools of Rome is vested in the cardinal vicar, but he is assisted by the pontifical commission, appointed by the Pope in 1878, and by special committees, each independent of the other, but all subject to the pontifical commission. In immediate charge are the directors of free and pay schools, a council of direction for higher and technical schools, and there are schools belonging to religious corporations which are somewhat independent of these commissions, although following their regulations. Normal schools prepare the teachers needed, and there are numerous secondary and technical schools. Higher grade institutions for the study of literature, history, and jurisprudence are under charge of men noted for literary or scientific attainments. For pupils coming from the provinces there are boarding schools. Elementary and industrial instruction is given in charitable institutions for orphans and other dependent classes. These are in charge of brotherhoods or sisterhoods. There are also art, trade, and professional schools brought before the Italian Congress. Commissions have been appointed for the further promoting of manual and physical training in the schools, to discuss the modifications of elementary school programmes so as to do away with "arid processes," and to establish schools complementary to the elementary grades. The subject of examinations for entrance to secondary schools has been decided so that pupils holding elementary grade certificates (*licenza elementare*) are not required to pass still other examinations before continuing their course in secondary grades.

#### REPORT OF ROYAL COMMISSION ON SECONDARY EDUCATION.

Chapter XIII (pp. 583-620) deals with the report of the Royal Commission on secondary education. The causes that led to the appointment of the commission are reviewed briefly and a synopsis of their principal recommendations presented. These look to the creation of local authorities charged with the distribution of the public funds that may be devoted to secondary education, and with authority also to secure adequate provision for secondary education within their respective provinces and subject to the central authority. In the new order this central authority would be raised to the dignity of an executive department presided over by a minister, and would absorb all the educational functions of the Government which are now divided between the education department, the science and art department, and the charity commissioners. An advisory council of professional experts is a proposed feature of the central organization.

Incidentally, the report of the commissioners gives a detailed view

of the present system of secondary instruction in England, the multiplicity of its agencies, and the strong and weak points in their conduct and outcome.

The bearing of the work of the commission is made clearer by digests of the evidence of the principal witnesses examined by the commission. Here are brought into view the various interests affected by proposed legislation in this province, and the opinions of representative men and women as to the means of securing an effective organization of the diverse agencies now engaged in the work without crippling them or interfering with their rights. As the testimony on these points covered 1,500 octavo pages and included 18,000 questions and answers, it was manifestly impossible to reduce the whole to a few pages. It was found that the testimony calculated to interest and to be understood by an American reader was in general given by persons deputed by technical associations, guilds, or school bodies intimately connected with the conduct of English elementary or secondary education, and that a running statement of the testimony given by such deputies would substantially represent the condition of secondary education in England and the manner in which responsible and informed persons thought that whatever was objectionable in those forms of education could be remedied.

Chapter XIV (pp. 621-712) continues the same subject and reprints various reports made by persons appointed by the Royal Commission to examine certain phases of education. It includes the report of Mr. J. J. Findlay on certain features of secondary education in the United States. He states that his purpose is to show the merits of our system, and his work is of value because it brings our method into comparison with English ways of dealing with the same problems. This report is followed by the answers to various questions on secondary education sent to Canada and the United States, and includes the reply of President Eliot, of Harvard University, in full. This is followed by Dr. J. G. Fitch's discussion of the training of teachers in England and Mr. M. E. Sadler's report on the leaving examinations as conducted in secondary schools in Prussia, a paper of value to us in view of the efforts we are making to find a proper adjustment between college and preparatory schools.

#### EDUCATION IN POLAND.

Professor Schoenfeld presents a review in Chapter XV (pp. 713-792) of higher education in Russian, Austrian, and Prussian Poland. This review is introduced by a historical statement dealing with the intellectual and literary life in Poland while its autonomy was still intact. The extent of Poland, the structure, beauty, and strength of its language, the founding of the University of Cracow, the rise of Polish schools at the time of the Protestant Reformation, the work of John Amos Comenius, the revival and the renationalization of public instruction by Stanislas Konarski in the eighteenth century are traced briefly.

This is followed by sections dealing with the present condition of higher education in Russian, Austrian, and Prussian Poland, in which the methods and aims of each of these Governments are pointed out. Attention has also been given to the materials for the history of Poland gathered in the various libraries of that country, public and private.

#### UNIVERSITY EDUCATION OF WOMEN IN ENGLAND.

A chapter has been prepared for this report on "Facilities for the university education of women in England" (pp. 805-891). This movement was preceded by the establishment of "local examinations"—first for boys and then for girls—held by the "delegacy for local examinations," which has the business part of all women's examinations in charge. The Oxford Association for the Education of Women makes the arrangements for instructing women who desire to be trained at Oxford, and by the appointment on its council of representatives from women's colleges it informally licenses these colleges. The first scheme for lectures and classes at Oxford dates from 1865; a new plan developed in 1873; in 1884 the first university examinations were open to women, and in 1893 the educational committee of the Association for the Education of Women was formed. Women may attend lecture courses at Oxford independent of this association, but their prospects are better if they are connected with it. The examinations leading to a degree in arts (which at Oxford include law, science, and theology) are open to women, but not the medical examinations. The regulations and studies for the B. A. examinations are fully described. The methods of study include university lectures by professors, readers, and tutors; also lectures provided by agreement among the different colleges, and there are lectures given for each college separately.

Somerville College, Lady Margaret Hall, and St. Hugh's Hall are described, and their purpose in the education of women indicated.

The woman movement at the University of Cambridge aimed "to place the work of women students on lines exactly parallel to those of the men." In 1881 the women's colleges—Girton and Newnham (which are fully described)—received their first formal acknowledgment from the university. Although degrees were refused, students who fulfilled certain conditions were admitted to "the previous and the tripos examinations." Such women students as have satisfied the examiners in a tripos examination receive a certificate from the university indicating the conditions of admission to examination. Women are not members of the university, but of colleges which, in their corporate capacity, are acknowledged by the university and have to submit to regulations laid down by the university. The real difference in the relative position of the men and women students is that the former may use B. A. and M. A., while the women receive only a diploma and can not claim a degree. They are admitted to the honors examination, but are excluded from the ordinary pass degree. The matter of exam-

inations is of the utmost consequence in English universities, the work of the classroom being but secondary. The real work at the women's colleges consists in the preparation for final honors examination (or triposes), and no student can present himself for a tripos more than once.

#### THE EDUCATIONAL STATUS OF WOMEN.

The aim of this chapter (pp. 893-976) is to present the conditions governing woman's education in different countries, as far as such information can be gained from authoritative sources—such as school laws, governmental reports, and other official publications. Discussions of the latest movements are presented; the date of the opening of foreign universities to women and the professions open to them, there and here, have been indicated.

#### THE CHAUTAUQUAN EDUCATION.

In his monograph on Chautauqua, a social and educational study (Chap. XIX), Prof. H. B. Adams treats this peculiarly American phase of university extension and summer school work with a fullness which it has never received before. Chautauqua is viewed as a social institution; its history is traced and its educational value emphasized; a third part is devoted to the new Catholic summer school of America.

Dr. Adams's work is complemented by a check list of American summer schools (Part II, Chap. XXXVI), in which the history of the summer school is briefly traced. This is followed by a bibliography of the subject and a list of such schools, with a brief statement of the scope of this work, the time of sessions, and the chief officer.

#### AGRICULTURAL AND MECHANICAL COLLEGES.

Chapter XXVI of Part II has been compiled as a general statement of the condition of the institutions endowed by the national land grants of 1862 and 1890. This statement is preceded by a historical review of the early attempts to introduce the subjects of physics, chemistry, manual arts, and agriculture.

#### AMERICAN MEDICAL SCHOOLS.

Dr. Marcel Baudouin, delegate from the French Government to the Chicago Exposition, visited a large number of medical schools and hospitals in the United States, including those as far west as San Francisco, Cal., and Portland, Oreg., and afterwards published an elaborate report upon the institutions visited. Some extracts from his report are presented (Chap. XXIX of Part II) in order to indicate how a competent observer, familiar with the conditions of professional instruction in Europe, has been impressed with institutions of like order in America.

Johns Hopkins Hospital, to which he says only one in Europe can be compared in hygienic resources and harmonious arrangement, the

Urban Spital at Berlin, receives a full description. The arrangement of this institution was not determined upon until after the presentation of many plans by architects and physicians and after many months spent by Dr. John S. Billings in the examination of hospitals in France and Germany. The intellectual culture and professional knowledge of the nurses, as well as the compensation received by them, also elicited comment.

The Woman's Medical College of Pennsylvania was taken as typical of the schools exclusively for women, and the medical school of the University of Pennsylvania as one of the oldest and most important in the United States.

Roosevelt and Bellevue hospitals, and Yale, Clark, Harvard, McLean, Cornell, Michigan, Colorado, and other schools and hospitals also receive attention.

#### THE SCHOOL DISTRICT.

The rapidly growing tendency to modify the character of the local school community makes of interest a study of the features of the school district as it appears in the several States. In Chapter XXXIV of Part II the character of the administration of school affairs is given for each State, especially with reference to the financial matters of each local community.

#### THE TRANSPORTATION OF CHILDREN.

A compendium of information relating to the transportation of children to and from school at the public expense is given in Chapter XXXV of Part II. Recourse has been had to transportation in several States in order to facilitate the work of consolidation of rural ungraded schools. The district system of management of school affairs, which was evolved in the laudable attempt to plant a school within the reach of every child, encouraged the establishment in thinly populated localities of numbers of small and weak schools, often having an average attendance of less than ten, sometimes of less than five pupils. This undue multiplication of small schools, resulting in a dilution of the school resources, has long been recognized as economically wasteful; that such schools are in addition pedagogically inefficient has been brought into prominence of late years through the contrast afforded by the modern graded school with its improved organization, equipment, course of study, methods of instruction, and management, and especially its well-trained and well-paid teachers. As the defects of the small district schools have become more apparent the tendency toward consolidating them into a system of strong, centrally located graded schools has become more pronounced.

The adoption of the town system of school management in several States has paved the way for consolidation; in fact, has been an indispensable preliminary, by bringing all the schools of each town under

one control. The chief difficulty now in the attempt to make one central school take the place of several scattered ones is to render such a union school accessible to all the pupils of the discontinued schools. The expedient of transporting at the public expense pupils who may live too far to walk has been resorted to on a considerable scale in Massachusetts and in a lesser degree elsewhere, and has been in general found to work satisfactorily. There is effected a saving of funds, while at the same time the children have the advantages of better schools. In the chapter to which I have referred have been collected reports of State and local school officials detailing their experience in the conveyance of pupils to school, which will be of use to those contemplating taking steps in that direction.

#### CONTRIBUTIONS TO EARLY EDUCATIONAL HISTORY OF THE UNITED STATES.

The Rev. A. D. Mayo contributes to the present report three chapters (XXXVII-XXXIX, of Part II) on the early history of the American common school. He treats with considerable fullness the history of the establishment of State school funds; education in the Northwest during the first half century of the Republic (1790-1840), and the American common school in New England for the same period.

#### OLD-FIELD SCHOOLS OF GEORGIA.

Chapter XLII of Part II contains a sketch of domestic, social, and school life in middle Georgia during the period of first settlement by the whites, and a description of the schools, known as "old-field schools," down to the founding of academies. In a region nearest the border of civilized and savage existence many were the straits to which the earliest settlers were subjected in their efforts at society organization, and particularly at obtaining for the young even rudimentary education. Some of those straits, somewhat peculiar because of remoteness from educational centers and other accidents in their condition, are described in this chapter. Characteristics, personal and professional, of old-time rural schoolmasters; their text-books, methods of teaching; their constantly varying, yet ever brief sessions; their discipline, direct and vicarious; their schoolhouses; their holidays, voluntary and enforced; games, dressing, etc., of school attendants. The account herein contained is founded upon entirely reliable reminiscences of many eminent Georgians whose educational beginnings were in those schools.

#### THE ATLANTA EXPOSITION.

The Cotton States and International Exposition in Atlanta, Ga., in the fall of 1895, was an event which attracted wide attention as a conspicuous example of the enterprise of the new South. The conditions seemed at the outset to be extremely unfavorable. The Columbian

Exposition at Chicago was still so fresh in the mind of every one that any similar effort would at once excite comparison with it, and without the tremendous resources and prestige of the Chicago undertaking it seemed folly to attempt another pretentious exposition so soon. Moreover, the country was in a state of financial depression that threatened disaster to new enterprises, and altogether there seemed little hope of creditable outcome to the affair. But such was the energy with which the idea was pushed and such was the public spirit of the people who supported it that a measure of success attended the Atlanta Exposition that was truly remarkable. It was not directly a financial success. Few expositions have been. But it did succeed in advertising the cities of the South and the resources of its agriculture and mines.

The report of the agent of this Bureau at the exposition is presented as Chapter XLIII of Part II. In it will be found a description of the exposition in general, a report of the exhibit of the Bureau of Education, and other papers.

#### ENGLISH TEXT-BOOKS ON THE AMERICAN REVOLUTION.

Chapter XLIV of Part II deals with English methods of teaching the history of the American Revolutionary war, and was prepared in accord with the suggestion of the Hon. Samuel Plimsoll, late member of Parliament and widely known for his efforts to alleviate the condition of the sailor. He believes that much ill feeling toward England has been engendered by the teachings of the school histories of the United States. Teachers of our national history in our schools will compare with interest the extracts from English text-books here given with the corresponding passages in our own text-books.

#### CONSULAR REPORTS.

Through the courtesy of The Honorable The Secretary of State, this office has been furnished with several valuable reports, made to the Consular Bureau of the State Department, devoted to the discussion of various features in the school systems of Germany, Italy, etc. The following are published in the present report: "Summary of the proceedings of the Educational Congress, Havre, 1895," by H. R. Bigelow, United States consul (pp. 303-305); "Public instruction in the Grand Duchy of Luxemburg," by Geo. H. Murphy, vice commercial agent (pp. 471-473); "Government pensions for public school teachers in Belgium," by Geo. W. Roosevelt, United States consul at Brussels (pp. 1105-1107).

I append hereto a list of the blank forms of inquiry sent out to obtain the statistics for the tables of this report.

I have the honor to be, very respectfully, your obedient servant,

W. T. HARRIS,  
*Commissioner.*

Hon. HOKE SMITH,  
*Secretary of the Interior.*

*List of blank forms of inquiry sent out.*

a School census imperfect under the present system.

b 8 to 15 where manual training is taught.

c Inclusive.

d In villages and cities of 10,000 inhabitants and over.

e First school census will be taken in 1896.

f No compulsory law.

g No school census.

h Law not in force.

i Police census.

j In cities, 7-16.

## XXXVIII REPORT OF THE COMMISSIONER OF EDUCATION.

TABLE 4.—*Number of pupils enrolled in the common schools at various periods, and the relation of the enrollment to the school population.*

| State or Territory.          | Number of different pupils enrolled during the school year, excluding duplicates. |           |            |            | Per cent of school population (5 to 18 years of age) enrolled. |          |          |          |

<sup>a</sup> Certain States report their school term in months. These have been uniformly reduced to days by multiplying by 20.

<sup>b</sup> In 1893-94.

<sup>c</sup> Approximately.

<sup>d</sup> In 1891-92.

*Observations on Table 8.*—The “aggregate number of days’ schooling given” to all pupils (see column 6), which is the same thing as the aggregate number of days attended by all the pupils, has been computed for those States which do not make an explicit report of this item by multiplying the average daily attendance of pupils by the average length of school term in days.

Conversely, the average length of school term (column 5) for the United States as a whole and for each of its geographical divisions has been obtained by dividing the aggregate number of days attended by the average daily attendance.

By this method the school term of each State, in taking the average, is in fact given a weight proportioned to the school attendance of the State, as should be done under a correct interpretation of the expression, “Average length of school term.” The result might more properly be called, “Average length of attendance,” which is essentially what it is desired to know.

A method in use in some States for finding the average school term, of a county, for instance, is to weight the different school terms of the towns or districts the county is composed of by the number of schools in each; in other words, the total number of days (or months) all the schools of a county were kept is divided by the total number of schools to get the average time each one was kept. So, in finding the average term for the State, the school is taken as the unit instead of the pupil, the Bureau’s method. When the schools differ much in size (number of pupils), as they do in all mixed urban and rural systems, varying from some half a dozen to 500 or more pupils each, the average term obtained by this method varies considerably from that obtained by the foregoing. The long terms of the large city schools not being given their proper weight, the resulting average is too small. The same objection applies still more forcibly to weighting the school terms of the different counties or towns by the number of school districts in each.

Still another method is to add together the school terms of the different counties or towns and divide by the number of such counties or towns; i. e., the simple arithmetical mean is taken. A conspicuous example of this occurs in the Indiana School Report of 1894 (p. 572) in the return from Marion County, where it is stated that 14,193 pupils in Indianapolis attended 185 days, and 856 pupils in West Indianapolis attended 160 days, while the average time the whole 15,049 pupils attended is computed at  $172\frac{1}{2}$  days, although nearly all (16 out of every 17) attended 185 days. This method, if it can be so called, gives altogether too short an average term, and nothing can be said in defense of it. It is as if, wishing to get the population per square mile of Minnesota and Dakota combined, we said, Minnesota, 9.86; Dakota, 0.92; average number of persons per square mile in the combined territory  $(0.92 + 9.86) \div 2 = 5.39$ , instead of dividing the total population of the two States by the combined area in square miles.

The “aggregate number of days’ attendance” is a statistical item of the utmost simplicity and of great value, about the meaning of which there can be little or no difference of opinion. Every teacher’s register that records the number of pupils present each day in any school, as they all presumably do, contains the data for ascertaining it for that school for the school year by the simple process of addition or summing up.

TABLE 9.—(1) *Length of school term.* (2) *The aggregate number of days' schooling given compared with the school population for a period of 25 years.*

| Year.        | Average length of school term, in days. |                          |                          |                         |                         |                   | Average number of days' schooling given for every child 5 to 18 years of age. |                          |                          |                         |                         |                   |

*a* An estimate for all the States of the division.*b* White schools only.

## RELATIVE GROWTH OF PUBLIC AND PRIVATE SCHOOLS.

The question as to the relative growth of public and private schools would seem to admit of being settled by a consideration of the past and present statistics of public and private school attendance. But the statistics of private school attendance are reported by only a few States, and these are for the most part imperfect and

fragmentary. The most complete, and apparently the most reliable, statistics of private schools, running through a series of years, are furnished by the annual State school reports of Rhode Island, Massachusetts, and Connecticut.

## RHODE ISLAND.

Rhode Island has taken for about two decades an annual school census, in which are reported: (1) The number of children between 5 and 15 years of age, inclusive; (2) the number of these attending Catholic schools; (3) the number attending "select" schools (these presumably including all non-Catholic private schools); and (4) the number not attending any school. The results at four different epochs are as follows:

|  | 1880.   | 1884.   | 1889.   | 1894.   |
|--|---------|---------|---------|---------|
| Children 5 to 15 years (inclusive) ..... | 52, 273 | 58, 858 | 64, 905 | 73, 290 |
| Number of these reported as attending—   |         |         |         |         |
| Catholic schools .....                   | 4, 817  | 6, 022  | 7, 974  | 10, 766 |
| Select schools .....                     | 1, 891  | 1, 922  | 1, 777  | 1, 573  |
| Public schools .....                     | 33, 504 | 38, 152 | 43, 098 | 49, 074 |
| Not attending any school .....           | 12, 279 | 12, 894 | 12, 056 | 11, 877 |
| Per cent in schools:                     |         |         |         |         |
| Catholic .....                           | 9. 21   | 10. 23  | 12. 29  | 14. 69  |
| Select .....                             | 3. 62   | 3. 27   | 2. 74   | 2. 15   |
| Public .....                             | 64. 09  | 64. 82  | 66. 42  | 66. 97  |
| Nonattendants .....                      | 23. 49  | 21. 91  | 18. 55  | 16. 19  |
| Total .....                              | 100. 41 | 100. 23 | 100. 00 | 100. 00 |

During the interval of fourteen years covered by this table the Catholic schools have made a gain of 5.48 pupils in every 100 census children. This gain has not been at the expense of the public schools, however, as the public schools themselves have made a gain of 2.98 pupils in the same interval. Both these classes of schools have gained from the ranks of the nonattendants and to a lesser degree from the select schools.

The opposition of the Catholic Church to the public schools is based upon well-understood grounds, involving the question of religious instruction according to its own creed to the pupils of its own faith as a part of the school course of study. This opposition has always existed, and the church will doubtless continue to pursue its declared policy of establishing and maintaining its own schools, as there is no present prospect of any other alternative, the question of division of the school funds and of compromise schools having well-nigh ceased even to be discussed in the United States generally. Increasing density and aggregation of population and larger financial resources are enabling the church to carry out always more effectually its policy of educating its own children, and to these circumstances may be attributed the gain which has been made in the Catholic schools of Rhode Island.

That there exists no general dissatisfaction with the public schools on pedagogical grounds, or on any grounds that would lead them to be supplanted more or less gradually by private schools, seems to be established by the figures relating to select schools in the foregoing table, which show not only a relative loss in the attendance upon these schools, but an absolute decrease of 318 pupils, while the number of census children has increased about 21,000, and the public school pupils over 15,000.

## MASSACHUSETTS.

Similar results may be deduced from a consideration of the statistics of the Massachusetts reports. Here we have no denominational classification, but a division of the nonpublic schools into "academies" and "private schools," the former class probably embracing in a general way the secondary schools, with or without preparatory departments, and the latter class the purely elementary schools. Moreover,

all the pupils of each class are given, there being no age limits, as in the case of Rhode Island, so that the number of pupils in school exceeds the total number of children 5 to 15 years of age enumerated by the school census. The returns of private school attendance are made in Massachusetts by the local school officials along with their other returns, and are not reported by the special census enumerators.

The results are as follows, taking the same years as before:

|  | 1880.   | 1884.   | 1889.   | 1894.   |
|--|---------|---------|---------|---------|
| Children between 5 and 15 years (by State school census) . . . | 307,321 | 336,195 | 367,785 | 400,325 |
| Pupils of all ages:  |         |         |         |         |
| In academies . . . . .   | 10,398  | 9,132   | 16,043  | 17,844  |
| In private schools . . . . .                                   | 15,891  | 25,306  | 37,620  | 48,319  |
| In public schools . . . . .                                    | 306,777 | 342,012 | 363,166 | 400,609 |
| Pupils for every 100 school census children:                   |         |         |         |         |
| In academies . . . . .   | 3.38    | 2.72    | 4.36    | 4.46    |
| In private schools . . . . .                                   | 5.17    | 7.53    | 10.23   | 12.07   |
| In public schools . . . . .                                    | 99.82   | 101.72  | 98.74   | 100.07  |

Here both classes of nonpublic schools show a gain in attendance as compared with the school population; and as the gain is especially marked in the case of the elementary ("private") schools, they having advanced from 5.17 to 12.07 pupils per 100 school census children, it is not unreasonable to assume, in the absence of positive knowledge, that the same agencies are at work as in the adjoining and similarly situated State of Rhode Island, and that the increase in the "private" school attendance of Massachusetts is largely due to the growth of the Catholic parochial school system. However this may be, there has been no encroachment upon the public schools in Massachusetts, which enroll, as compared with the school population, a number slightly larger in 1894 than in 1880, viz, 100.07 per 100 census children in 1894 and 99.82 per 100 in 1880.

# CONNECTICUT.

In Connecticut the private school attendance can be given only in bulk, without classification. The private school attendants and the nonattendants are reported by the school census enumerators, and limited to those between 4 and 16 years of age. The public school attendance is based upon teachers' reports, and includes pupils of all ages. The figures are as follows:

|   | 1880.   | 1884.   | 1889.   | 1894.   |
|---|---------|---------|---------|---------|
| Children enumerated between 4 and 16 years of age (State school census) . . . . . | 140,235 | 150,601 | 157,243 | 169,457 |
| Enumerated children in private schools . . . . .                                  | 12,643  | 14,580  | 18,269  | 21,460  |
| Pupils of all ages in public schools . . . . .                                    | 119,694 | 123,230 | 127,089 | 135,048 |
| Enumerated children in no school . . . . .  | 13,565  | 20,199  | 29,425  | 29,382  |
| Per cent of enumerated children:  |         |         |         |         |
| In private schools . . . . .  | 9.02    | 9.68    | 11.62   | 12.66   |
| In no school . . . . .  | 9.67    | 13.42   | 18.71   | 17.30   |
| Pupils in public schools for every 100 enumerated children . . .                  | 85.37   | 81.86   | 80.82   | 80.28   |

This table would seem to show that the private schools have gained 3.64 pupils per 100 census children in the fourteen years, while the nonattendants have increased 7.63 during the same period, making a total increase in these two classes of 11.27. This increase of 11.27 must have been at the expense of the only remaining class, i. e., the public schools; but the public schools have lost only 5.09 pupils (of all ages) per 100 census children. This inconsistency can proceed only from errors in the reports of census enumerators or teachers, or both. In point of fact, the annual

State school reports covering the early portion of the period embraced in the table make frequent complaint of inaccuracies in the school census; that the lists are carelessly compiled, "are often made without visiting families, upon estimates" (Report 1885, p. 24), etc. It is useless to attempt to base upon such data any conclusions regarding the relative growth of public and private schools, but there are certain considerations bearing upon the matter which may be mentioned.

First. In the case of enumerators making up their lists without visiting families and upon estimates, whether from their own personal knowledge or from hearsay, they would assuredly get their best results in the better quarter of cities and towns, among the old-established and well-known families of business men, mechanics, etc. Among the lower classes of laboring people, on the other hand, including factory operatives and others of migratory habits and difficult to keep run of, in obscure quarters and in the slums, there would be more disposition for the enumerators to shirk their work, and more difficulty in doing it well if they made an honest effort. Now, it is among these latter classes that most of the nonattendants are found, especially in Connecticut; and the presumption from the figures and State reports is that these nonattendants were not hunted up and reported as fully in 1880 as in 1894. There are, therefore, good grounds for surmising that the apparent large increase in the ranks of nonattendants arises from imperfect reports in the earlier years.

Second. What increase there is in the number of nonattendants is probably due, in large measure, to the growing indisposition to send children to school at as early an age as formerly. This trend of opinion found expression in the Connecticut law of 1877, which authorized school visitors to exclude from school, when they saw fit, children below the age of 5 years. Six years is now becoming generally recognized as the proper age for a child to begin his school education. If we take the children from 8 to 14 years of age only, the number of nonattendants will be found to be decreasing. In Connecticut in 1884 there were 2,841 nonattendants from 8 to 14 years of age, or 1.90 per cent of the school population; in 1894 there were only 2,292 or 1.35 per cent of the school population.

Third. This withdrawal of young children from school may also explain in part the comparative loss in attendance on the public schools; but there can be no doubt that this apparent loss is occasioned in part by former exaggerated reports of enrollment. The same public school pupils used to be, and still are in many localities in the United States, enrolled in two or more towns, schools, or even classes in the same school. It was only in the seventies that Massachusetts began to exclude duplicate enrollments from the reports of school attendance, and it is highly probable that the practice of registering pupils more than once existed in Connecticut as elsewhere, and if the figures for the earlier years in the foregoing table were corrected for duplicate registration they would probably be somewhat lessened, even to the extent of showing a gain for the late years, instead of loss.

With these considerations in mind, it would be hazardous to assert that the figures prove that the private schools have been gaining in Connecticut at the expense of the public.

TABLE 15.—Receipts of school moneys.

## CHAPTER I.

### CITY SCHOOL SYSTEMS.

---

The single constant factor observable in the statistics of city schools is progressive increase in numbers. It is fitting, therefore, that an examination be made into the facts and conditions of growth of the cities themselves in order to arrive at a clear understanding of the growth of the schools.

Beginning with five cities of 8,000 inhabitants, with an aggregate population of 108,750 in 1790, there has been an increase at every census, both in the total urban population and in the number of cities, until at the last census, in 1890, there were reported 448 cities, with 18,284,385 inhabitants. In 1790 the cities comprised 2.77 per cent of the whole population of the country; in 1890 that ratio had grown to 29.20 per cent.<sup>1</sup>

The conclusion to be drawn from this is undoubtedly that we are becoming as a nation less and less agricultural and more given to those diversified occupations for the pursuit of which the conditions presented by cities are necessary concomitants.

This change in the general character of the population is not peculiar to America, but is noticeable in even a greater degree in Europe, where in some cases, as in Scotland, the change amounts almost to a social revolution.

The prime cause for this extensive modification of social conditions is due in general to the unprecedented advance made in the last century in the invention and use of machinery, by which productive power has been enormously increased. This operates both to lessen the population of the country and to increase that of the city. By the use of improved labor-saving machinery one man may to-day cultivate more land and raise larger crops than were possible to ten men a century ago, when most of the work of the farm was done by hand. Even to-day, in some parts of the country where the conditions are still some-

---

<sup>1</sup> See footnote on page 9.

what primitive, the standard allowance is a mule and two hands to 60 acres. But, as Edward Atkinson has shown, on the great farms of North Dakota, where machinery is used to the greatest possible extent, the labor of one man is equivalent to the care of 260 acres. Even here we have the difference between 30 and 260 acres per man.

The same agency, machinery, at the same time that it has lessened the number of men required for a given amount of farm work, has provided for the surplus laborers by transferring to the city many of the former occupations of the farm; the manufacture of implements, spinning, weaving, and the like were formerly the work of the farmer and his family. But with the use of improved tools, which are not available to the farmer, and with the help of the steam engine these things may now be done in the city so much more cheaply and expeditiously that the farmer finds it to his interest to confine himself almost wholly to the cultivation of the soil and the production of the raw material, and to buy manufactured products from the town. Thus it happens that not only is labor highly specialized and manufacturing divorced from agriculture, but the importance and volume of trade and transportation are vastly augmented. Other changes in this general direction conduce to the concentration of people in the cities, in which nearly all occupations not directly concerned with the production of raw material may be pursued more conveniently and advantageously than in the sparsely settled rural communities.

The aggregation of people in close contact with each other in itself gives rise to new needs that must be met by the establishment of other industries, giving employment to still more people, who must also live in the cities. The same density of population makes possible greater combinations for education, business, or amusement than would be practicable in the country. The graded school, the daily newspaper, the library, the theater, the opera, and many other agencies that add to the pleasure of living and to the cultivation of the mind attain their highest development in the city, and some of them can exist nowhere else. Such attractions lure men to the communities in which they exist and indirectly lead to the multiplication of industries, for men unable to find a place in those already existing invent new ones in order to be near the attractions they desire, and by presenting novelties create a demand for them. Thus cities increase of their own momentum, and in their development grow from mere appendages to surrounding agricultural regions into great centers of dominating influence.

The agricultural districts, in turn, feel the reaction from the growth of the cities. The demand for provisions is greater, because there are more people who must buy them. Machinery has reduced the cost of manufactured articles; they are used more freely and in greater quantities, so that the market for raw material is extended. It follows, then, since more of farm products are required, that there is not usually any decrease in the number of people in the country surround-

ing the cities, though there may be, and in fact usually is, a great change among individuals. But such is the facility of transportation from one part of the world to another that if the territory contiguous to a city is not favorable to agriculture because of poverty of soil, adverse climate, or other reasons, it is not able to compete even in the production of raw materials with localities more favored by nature even though the latter may be far removed from the market. This is true of Scotland and of some parts of New England, where there has been an actual decrease in rural population.

These general statements apply to the United States as to all the rest of the civilized world. But in addition there are other causes that have produced the remarkable extension of city influences in this country.

It was formerly the policy of England to use her colonies merely as feeders to the mother country, and to encourage their prosperity only so far as it added to the immediate welfare of England and for that purpose only. Manufactures which would compete with home manufactures were forbidden, and commerce, except that conducted by means of English ships, was prohibited. This hampering of colonial industries began as early as 1651 with the navigation act, and continued to the Revolution, to which it was one of the contributing causes.

Under the influence of such a policy, agriculture was practically the only industry freely open to the American colonists. The people were widely scattered and the cities insignificant, even when compared to the small population, for many of those city functions which should have been performed by American cities were reserved for the cities of England. There were only 32,328 people in New York in 1790, and 28,522 in Philadelphia, the largest cities in the country. Boston had 18,038 inhabitants, Charleston 16,359, and Baltimore 13,503. These were the only places worthy the name of cities according to the accepted definition of the term, for the next in size, Salem, Mass., had only 7,921.

Almost immediately after the removal of the baleful influence of the English colonial policy the cities began to develop, and their first impetus may be ascribed primarily to the proper assumption of functions clearly their own. New York speedily became a city of importance, and in thirty years had quadrupled in size. Philadelphia, Boston, and Charleston grew less rapidly, but Baltimore's growth was proportionally as great as that of New York. Villages became cities, and in 1820 there were ten more cities than in 1790.

It is to be remembered that even at the present time this country is in its formative stage. The conditions under which the industries must finally be pursued are still unsettled in many parts of the country, for the pursuits characteristic of whole States are those of a pioneer people. To be sure, this is less true now than at any previous period, for with increasing development come more settled conditions. But a

sufficient portion of our territory remains unoccupied, or only partially settled, to justify as true to-day, though in a less degree, the statements that may be made as to conditions of progress in the past, and vice versa. The following therefore may be taken as a type of the growth of American cities.

Agriculture is usually the only industry open to the first permanent settlers in a new country. The difficulties of obtaining supplies and the impossibility of profitable manufacture or trade when the population is sparse compel the settler to rely upon his own exertions in tilling the soil for the simple necessities of life. He therefore chooses for his home the place promising the richest return for his labor. The most desirable lands are thus first occupied, then the less desirable. Later comes the store for the exchange of products and the sale of articles not produced on the farm. Then simple mechanical industries, as a blacksmith shop, a mill, or a wagon shop, are established; a church and school are built, a post-office opened, and a village is begun. If the community is prosperous the village speedily grows. New stores are added, a weekly newspaper begun, more churches are built, and other industries are started. Under favorable conditions, such as proximity to a navigable river or railroad, and especially if at the junction of two or more transportation lines, the growth is all the more sure and steady. If the conditions for manufacturing are also especially favorable, further development into a city is reasonably certain. The first articles manufactured are generally those required in the immediate neighborhood, but gradually the field is broadened and goods are sold in distant communities less favorably situated for the manufacture of those particular articles, special facilities in transportation making a desirable center of distribution, and proximity to mines or to great forests equally insuring development.

But the growth of the cities is not at the expense of the country surrounding them, for it is at first the result of the growth and needs of that country. Their subsequent growth, resulting from the extensive use of machinery and from their own momentum, as previously described, does no injury to the country but rather aids it. Many of the best and most energetic of those from the country are drawn into the city, but a balance in numbers, though not necessarily in character, is struck by others who go from the city to the country, or who come from other sections and from foreign countries.

The city absorbs an undue share of foreign immigration, and its population grows proportionally much faster than that of the country, because comparatively few persons are needed for farm work, and, as a rule, that number is all but supplied when the building of the city is scarcely begun. Still newer countries and fresher lands are open to those who desire to begin anew as farmers, and in these days of rapid transportation and cheap freights distance from city markets is of small account as compared with cheaper and more fertile lands, except in a

limited class of products, such as vegetables and the like, which must be sold immediately.

This illustrates the growth typical of American cities. The country is dotted over with communities in all the various stages of development, and each year a considerable number of them attain the size and importance sufficient to justify them in being considered as cities in all discussion of urban questions. It is to these new cities to a large extent that the wonderful urban growth shown by the censuses is due. Even before they could be ranked as cities they were in existence as villages, or centers of varying degrees of importance, and contained the germs of the future cities.

To determine the relative growth of these communities and of the country at large it would be necessary to compare the relative importance of the communities as they now exist with their relative importance at any past period with which the comparison is desired. But since we wish to consider cities only, this comparison would not be desirable, for it would require us to consider in the past period many communities, which, though cities *in posse*, were not yet cities in any true sense. A better comparison which has the same significance is between those which might properly be called cities at the former period and the same cities at the latter period.

This means simply tracing the growth for a stated time of all cities in the United States that have been cities during all that time.

The question is not whether the average character of the population is changing, but as to whether cities, after they become cities, grow at a rate disproportionate to the growth of the country at large.

The growth of new cities does not affect the propriety of the comparison, because they do not in general alter the relative importance of the older cities. The old cities in general assume new functions and become centers of the new centers. Their influence remains predominant in financial, commercial, and even in social affairs.

The table below was constructed to present comparisons of the cities of four periods, namely, 1790, 1820, 1840, and 1850, with the same cities as they exist to-day. The census of 1790 was the first taken after the adoption of the Constitution; that of 1820 was sufficiently removed to show the tendencies of independence, as opposed to those of colonial dependence, in regard to the matter in hand; that of 1840 marks the half century between the first and the last census, and that of 1850 was the first taken after the territorial acquisition of 1848, which made the United States what it is at present, if Alaska be excepted. As the table shows, the 5 cities which in 1790 had in their limits 2.77 per cent of the whole population of the country, in 1890 had 5.59 per cent of the same. Their relative importance had doubled. By 1820 there had been sufficient time for the cities to come into their own just inheritance; the 15 cities at that date comprised 4.73 per cent of the population; in 1890 the same 15 cities had 7.39 per cent of the population.

They had increased in importance by 56 per cent; their growth was over one-half greater than that of the entire country.

Similarly, in 1840 there were 53 cities whose population was 8.73 per cent of the whole; in 1890 it was 13.10 per cent, a relative increase of almost exactly 50 per cent. In this case the urban growth was just one-half more, relatively, than that of the whole United States. The proportion is less in the comparison of the 91 cities of 1850 with the same cities of 1890, for at the earlier date 12.58 per cent of the population was in those cities, while at the later period the proportion was 17.51 per cent; relatively, they had grown two-fifths more than the entire country.

If we put the same statements in another form, it appears that the 5 cities which have existed as cities for one hundred years have in that time increased 100 per cent in relative importance as judged by population; the 15 cities that have existed as such for seventy years or more have in the last seventy years increased 56 per cent in relative importance; those (53) which have been cities for fifty years or more have in the last fifty years grown relatively 50 per cent; and those (91) which have existed as cities for forty years or more have increased in relative importance by 40 per cent in the last forty years.

The coincidences in these figures are striking. With the exception of the comparison based on 1820, the percentages are the same as the number of years included in the comparison. This would seem to indicate that the annual rate of growth of cities is greater by 1 per cent per annum than the corresponding rate of growth of the nation, and that the excess increases in arithmetical ratio instead of geometrical ratio. This, however, is probably not strictly true; the several ratios mentioned are not properly comparable with each other, since they represent different sets of cities. But naturally the true ratio would lie not far from that shown by the calculation presented.

TABLE 1.—*Cities of 8,000 inhabitants or more in 1790, 1820, 1840, and 1850, with population of same cities in 1890. (a)*

| City.                     | Population of cities having 8,000 or more inhabitants— |          |          |          | Population in 1890 of cities mentioned in preceding columns. |
|---------------------------|--|----------|----------|----------|--|
|                           | In 1790.   | In 1820. | In 1840. | In 1850. |  |
| 1                         | 2  | 3        | 4        | 5        | 6  |

a The figures in the totals do not correspond, except for 1890, with those of similar kind presented in the publications of the Eleventh Census. (See Compendium, Part I, population, pp. lxxi-lxxiii.) The cities here given and their populations were obtained after a careful examination of original publications of the censuses quoted, in connection with later documents which are supposed to have corrected the errors of the old publications. The causes for the differences may be readily found by examination of the original documents. The following are examples: The 6 "cities of over 8,000 inhabitants" reported by the Eleventh Census to exist in 1790, included Salem, Mass., whose population was 7,921; the population reported for Philadelphia included the "suburbs" outside the corporate limits of the city; that for New York included Harlem. The census reports only 13 cities in 1820, omitting Northern Liberties and Southwark, Pa. St. Louis is reported to have had 10,049 inhabitants in 1820; this is erroneous, for St. Louis was then only a straggling village. The population given was that of St. Louis County. The census figures for the year 1890 are accepted without investigation. They are original sources of information, whereas the figures of any other census which might appear in that of 1890 are secondary only, and may properly be verified.

b Not in the United States until 1803.

TABLE 1.—*Cities of 8,000 inhabitants or more in 1790, 1820, 1840, and 1850, etc.—Cont'd.*

| City.   | Population of cities having 8,000 or more inhabitants— |             |              |              | Popula-<br>tion in 1890<br>of cities<br>mentioned<br>in preced-<br>ing col-<br>umns. |
|---|--|-------------|--------------|--------------|--|
|   | In 1790.   | In 1820.    | In 1840.     | In 1850.     |  |
| 1   | 2  | 3           | 4            | 5            | 6  |

From the discussions of the preceding pages the meaning of the summaries in the following tables may be more readily understood.

It is intended to present each year the school statistics of all the cities in the United States that have over 8,000 inhabitants, with the summaries of the same. This first involves the preparation of a list of such cities—an easy task if the population of each is known. But that is the case only once in every ten years, when the United States census is taken. It would be obviously wrong to use the same list for ten years, because, as we have already seen, constant additions are being made to the number of cities. It is necessary, therefore, to constantly revise the list, and in this Bureau this is done whenever evidence appears to indicate the need of revision. School statistics are gathered from all communities of over 4,000 inhabitants, and when the reports from any community show that the schools have grown beyond the point which might be expected to be reached by a place having less than 8,000, further inquiry is made into the conditions of

growth of the place, noting especially the ratio between its population and its school enrollment in 1890, and if the result of the investigation justifies it the name of the community is at once transferred to the list of cities and its statistics tabulated in that category.

Naturally, the number of additions made each year to the list is not uniform and the rate of increase in the same statistical item varies considerably from one year to another, as the tables for the several years show. It is, therefore, not practicable to institute comparisons between different years on the basis of the figures presented. But since all the cities are represented in the totals, either by accurate figures or by estimates believed to be reliable, it is perfectly safe to compare the several items for the same year; or the ratios resulting from such comparisons may be compared with similar ratios for another year. For example, the reported enrollment for 1893-94 was greater than that for 1892-93 by 8.68 per cent, while the reported enrollment for 1894-95 was only 5.56 per cent more than that for 1893-94; the corresponding increase between 1891-92 to 1892-93 was 4.86 per cent. Actually there was no such difference in the rate of increase; the variation was caused by the fact that in one year (1892-93) the facilities for investigating the growth of cities were greater than before. More cities than usual were added to the list, and consequently the apparent increase was greater than usual. All this indicates nothing more than a difference in the collection of statistics.

The average of these yearly rates of increase in a general way approximates the true rate of increase, but not with sufficient accuracy for precise comparisons. These are possible only in census years, and then for ten-year periods only.

But in 1892-93 the ratio of average attendance to enrollment was 71.9 per cent; in 1893-94 it was 72.9 per cent, and in 1894-95, 73.6 per cent. These quantities are properly comparable, for even though the number of cities represented be different, the ratios developed are presumably not affected by that difference. The attendance was undoubtedly more regular in 1893-94 than in 1892-93, and still more regular in 1894-5. Similar comparisons may be made between other ratios in the same way.

Then the enrollment in public schools increased from 1893-94 to 1894-95 by 5.56 per cent, and under the same statistical conditions the private and parochial schools increased by 2.72 per cent. These items are comparable, and the inference is that the public schools have grown more rapidly than the private schools.

Table 2 is designed to present opportunity for comparisons of the kind last described; Table 5 for comparisons of the previous kind.

TABLE 2.—*Summary of statistics of school systems of cities containing over 8,000 inhabitants, showing increase or decrease from previous year.*

[NOTE.—No correct list of cities of a given population can be made in other than census years. The percentages of increase shown below, therefore, are relative only and are intended to be used for no other purpose than comparison with each other.]

**Enrollment:**

|                            |             |
|----------------------------|-------------|
| 1893-94 .....              | 3, 126, 659 |
| 1894-95 .....              | 3, 302, 841 |
| Increase .....             | 176, 182    |
| Per cent of increase ..... | 5. 56       |

**Aggregate number of days' attendance of pupils:**

|                            |               |
|----------------------------|---------------|
| 1893-94 .....              | 436, 806, 735 |
| 1894-95 .....              | 462, 450, 038 |
| Increase .....             | 25, 643, 303  |
| Per cent of increase ..... | 5. 88         |

**Average daily attendance:**

|                            |             |
|----------------------------|-------------|
| 1893-94 .....              | 2, 281, 237 |
| 1894-95 .....              | 2, 431, 967 |
| Increase .....             | 150, 730    |
| Per cent of increase ..... | 6. 61       |

**Average length (in days) of school term:**

|                |        |
|----------------|--------|
| 1893-94 .....  | 191. 5 |
| 1894-95 .....  | 190. 1 |
| Decrease ..... | 1. 4   |

**Enrollment in private schools (estimated):**

|                            |          |
|----------------------------|----------|
| 1893-94 .....              | 820, 250 |
| 1894-95 .....              | 842, 555 |
| Increase .....             | 22, 305  |
| Per cent of increase ..... | 2. 72    |

**Number of supervising officers:**

|                            |        |
|----------------------------|--------|
| 1893-94 .....              | 3, 374 |
| 1894-95 .....              | 3, 685 |
| Increase .....             | 311    |
| Per cent of increase ..... | 9. 21  |

**Number of teachers:**

|                            |         |
|----------------------------|---------|
| 1893-94 .....              | 62, 999 |
| 1894-95 .....              | 66, 993 |
| Increase .....             | 3, 994  |
| Per cent of increase ..... | 6. 34   |

## Number of buildings:

|                            |        |
|----------------------------|--------|
| 1893-94 .....              | 7, 743 |
| 1894-95 .....              | 8, 106 |
| <hr/>                      |        |
| Increase .....             | 363    |
| Per cent of increase ..... | 4. 69  |
| <hr/>                      |        |

## Number of sittings or seats:

|                            |             |
|----------------------------|-------------|
| 1893-94 .....              | 2, 898, 295 |
| 1894-95 .....              | 3, 119, 277 |
| <hr/>                      |             |
| Increase .....             | 220, 982    |
| Per cent of increase ..... | 7. 62       |
| <hr/>                      |             |

## Value of school property:

|                            |                 |
|----------------------------|-----------------|
| 1893-94 .....              | \$228, 439, 334 |
| 1894-95 .....              | 236, 846, 394   |
| <hr/>                      |                 |
| Increase .....             | 8, 407, 060     |
| Per cent of increase ..... | 3. 68           |
| <hr/>                      |                 |

## Expenditure for teaching and supervision:

|                            |                |
|----------------------------|----------------|
| 1893-94 .....              | \$40, 717, 650 |
| 1894-95 .....              | 44, 155, 706   |
| <hr/>                      |                |
| Increase .....             | 3, 438, 056    |
| Per cent of increase ..... | 8. 44          |
| <hr/>                      |                |

## Expenditure for all purposes excepting loans and bonds:

|                            |                |
|----------------------------|----------------|
| 1893-94 .....              | \$69, 886, 413 |
| 1894-95 .....              | 74, 721, 332   |
| <hr/>                      |                |
| Increase .....             | 4, 834, 919    |
| Per cent of increase ..... | 6. 93          |
| <hr/>                      |                |

TABLE 3.—*Summary, by States, of enrollment, attendance, supervising officers, and teachers in cities containing over 8,000 inhabitants. (a)*

| Cities of—                 | Number of school systems. | Enrollment in public day schools. | Aggregate number of days' attendance of all pupils. | Average daily attendance. | Enrollment in private and parochial schools (estimated). | Number of supervising officers. | Number of teachers. |         |        |
|----------------------------|---------------------------|-----------------------------------|---|---------------------------|--|---------------------------------|---------------------|---------|--------|
|                            |                           |                                   |   |                           |  |                                 | Male.               | Female. | Total. |
| United States .....        | 574                       | 3,302,841                         | 462,450,038   | 2,431,967                 | 842,555  | 3,685                           | 5,023               | 61,971  | 66,993 |
| North Atlantic Division... | 221                       | 1,561,959                         | 221,016,405   | 1,134,394                 | 385,022  | 1,586                           | 2,048               | 29,553  | 31,601 |
| South Atlantic Division... | 43                        | 239,274                           | 31,973,121  | 173,593                   | 51,946   | 183                             | 590                 | 4,336   | 4,925  |
| South Central Division...  | 51                        | 181,464                           | 22,808,432  | 126,260                   | 42,113   | 248                             | 379                 | 3,130   | 3,509  |
| North Central Division...  | 224                       | 1,137,872                         | 161,785,375   | 864,235                   | 333,215  | 1,427                           | 1,670               | 21,719  | 23,389 |
| Western Division .....     | 35                        | 182,271                           | 24,866,705  | 133,485                   | 30,259   | 241                             | 336                 | 3,233   | 3,569  |
| North Atlantic Division:   |                           |                                   |   |                           |  |                                 |                     |         |        |
| Maine .....                | 9                         | 21,702                            | 2,960,083   | 16,843                    | 5,039  | 29                              | 40                  | 535     | 575    |
| New Hampshire .....        | 6                         | 14,105                            | 1,869,609   | 10,635                    | 6,875  | 14                              | 29                  | 325     | 354    |
| Vermont .....              | 2                         | 3,838                             | 476,527   | 2,630                     | 1,975  | 5                               | 6                   | 87      | 93     |

*a* In the preparation of this table omissions and deficiencies in the returns of individual cities were supplied from the best sources available. If no accurate information could be had in any particular case, an estimate based upon ratios developed in the other cities of the same State was used, unless it appeared that the conditions were essentially different in the city for which precise data were lacking.

Blanks indicate that the number of cities which reported the item was not sufficient to justify an estimate to supply the deficiency.

\* Statistics of 1893-94.

TABLE 4.—*Summary, by States, of school property and expenditures in cities containing over 8,000 inhabitants. (a)*

| Cities of—                    | Number of build-ings. | Number of seats or sittings for study. | Value of all public prop-erty used for school purposes | Expendi-ture for supervision and teach-ing. | Expendi-ture for all purposes except loans and bonds. |

*a* In the preparation of this table omissions and deficiencies in the returns of individual cities were supplied from the best sources available. If no accurate information could be had in any particular case, an estimate based upon ratios developed in other cities of the same State was used, unless it appeared that the conditions were essentially different in the city for which precise data were lacking.

Blanks indicate that the number of cities which reported the item was not sufficient to justify an estimate to supply the deficiency.

\* Statistics of 1892-94.

TABLE 5.—Comparative statistics of cities containing over 3,000 inhabitants, summarized by States, etc.

| Cities of—               | 1   |   |  |                                |   |   |   |   |  |   |   |  |   |  |
|--------------------------|---|---|--|--------------------------------|---|---|---|---|--|---|---|--|---|--|
|                          | Ratio of private school-enrollment to total public and private school-enrollment. | Ratio of average attendance to total enrollment (public schools). | Average number of days of attendance of each pupil enrolled. | Average length of school term. | Average number of pupils in attendance to each teacher. | Average number of teachers to each supervising officer. | Average number of seats for 100 pupils in attendance. | Average number of seats or sitings to a building. | Value of school property per capita of pupils in attendance. | Cost of tuition (i. e., supervision and teaching) per capita of pupils in attendance. | Total cost of schools per capita of pupils in attendance. | Average cost per day of tuition for one pupil. | Average daily expenditure per pupil for all purposes. |  |

## CHAPTER II.

### STATISTICS OF SECONDARY SCHOOLS.

The number of students receiving secondary instruction in institutions reporting to the United States Bureau of Education for the scholastic year 1894-95 was 539,712, an increase of 59,354 over the number reported for the year 1893-94. This is probably in excess of the actual increase in the number of students, as allowance must be made for the addition of several hundred high schools to the lists. While some of these are newly established schools, others have been in existence for a year or two, but they reported to this office for the first time in 1895. These 539,712 secondary students were distributed among eight classes of institutions as follows:

|   |          |
|---|----------|
| In public high schools .....              | 350, 099 |
| In public normal schools .....            | 5, 247   |
| In public universities and colleges ..... | 6, 024   |
| In private high schools .....             | 118, 347 |
| In private normal schools.....            | 8, 589   |
| In private universities and colleges..... | 43, 164  |
| In private colleges for women .....       | 4, 824   |
| In manual training schools.....           | 3, 418   |

|  |          |
|--|----------|
| Total secondary students reported..... | 539, 712 |
|--|----------|

Of the total number above enumerated 361,370 were in public institutions and 178,342 in private institutions. In addition to those counted in the three classes of public institutions there were many others pursuing secondary studies in the common schools of the country. In many States, and particularly in the States where high schools are few, in almost every public elementary school one or more students may be found pursuing certain secondary studies. In most of the States these are not reported as secondary students to the State authorities, but are counted with the elementary pupils. This Bureau is without the data necessary for a close estimate of the number of such secondary students in the elementary schools. Probably the number is not less than 50,000 nor more than 100,000.

#### SECONDARY SCHOOLS.

More than 50 pages of the Education Report for 1893-94 were devoted to a statistical review of secondary education. The statistical summaries of that year were discussed with minuteness. As the tables for

1894-95 are in practically the same form, and no new facts have been brought to light, a lengthy discussion of the statistics presented in this report is not deemed necessary. A brief explanation of the tabular summaries will be sufficient.

The statistics here considered relate directly to secondary schools, i. e. to public high schools and private high schools and academies. Secondary students in other institutions are not considered at present because information concerning them is not complete. For the past six years this Bureau has annually collected information directly from several thousand public and private high schools. The forms of inquiry, while improved from year to year, have followed the same lines, seeking to bring out and make prominent certain facts. The number of schools reporting increased from 4,158 in 1890 to 6,892 in 1895. There was also improvement in the manner of collecting information, and year by year the work of compilation has gained in thoroughness. The continuity of the statistics has remained unbroken while they have gained in accuracy from year to year.

The following table is a condensed review of the statistics of public and private high schools for the past six years:

| Year reported. | Public.  |           |           | Private. |           |           | Total.   |           |           |
|----------------|----------|-----------|-----------|----------|-----------|-----------|----------|-----------|-----------|
|                | Schools. | Teachers. | Students. | Schools. | Teachers. | Students. | Schools. | Teachers. | Students. |
| 1889-90 .....  | 2,526    | 9,120     | 202,963   | 1,632    | 7,209     | 94,931    | 4,158    | 16,329    | 297,894   |
| 1890-91 .....  | 2,771    | 8,270     | 211,596   | 1,714    | 6,231     | 98,400    | 4,485    | 14,501    | 309,996   |
| 1891-92 .....  | 3,035    | 9,564     | 239,556   | 1,550    | 7,093     | 100,739   | 4,585    | 16,657    | 340,295   |
| 1892-93 .....  | 2,812    | 9,489     | 232,951   | 1,434    | 6,261     | 96,147    | 4,246    | 15,750    | 329,098   |
| 1893-94 .....  | 3,964    | 12,120    | 289,274   | 1,982    | 8,009     | 118,645   | 5,946    | 20,129    | 407,919   |
| 1894-95 .....  | 4,712    | 14,122    | 350,099   | 2,180    | 8,559     | 118,347   | 6,892    | 22,681    | 468,446   |

In this chapter will be found tables summarizing the principal statistics gathered from the 6,892 secondary schools, while in Part IV of this report the information concerning each school is given in detail.

Tables 1 to 10 in this chapter relate to public high schools in all the States; Tables 11 to 22 relate to private high schools, while Tables 23 to 31 combine the statistics of public and private high schools dealing with the institutions as secondary schools simply.

### PUBLIC HIGH SCHOOLS.

In these tables the statistics are summarized by States and then by divisions. The geographical divisions are purely arbitrary and are used here for the sake of uniformity, the statistics of the Census Office having been compiled in this form. For the purposes of this Bureau a different grouping of the States would be better. For example, the South Atlantic and the South Central divisions might be thrown together and the State of Missouri included with them. This grouping

would be more convenient to those who wish to study the progress of education in the former slave States during the past twenty years. Such a study is not contemplated for this report.

For the year ending June, 1895, the number of public high schools reporting to this office was 4,712. It is believed that this is within a few hundred of the total number of public high schools in operation during the year. Many so-called high schools were not included in the list for the reason that they had not reached the ordinary standard for secondary schools as indicated in the form of inquiry sent out from this office. A secondary student was there defined as one pursuing at least two of the recognized secondary studies. The secondary studies named included Latin, Greek, French, German, algebra, geometry, trigonometry, astronomy, physics, physical geography, geology, zoology, botany, physiology, rhetoric, English literature, and history.

A reference to Table 1 will show that the 4,712 public high schools were distributed in the five divisions as follows: North Atlantic, 1,156; North Central, 2,424; South Atlantic, 378; South Central, 542; Western, 212. Ohio alone had 474 high schools, New York 332, Illinois 305, Iowa 298, Michigan 271, Indiana 270, Pennsylvania 256, and Massachusetts 216. In the South Central Division Texas had 156 high schools and in the South Atlantic Georgia had 118.

The 4,712 public high schools had 14,122 teachers employed in instructing secondary students. This number does not include those teachers whose time was wholly devoted to the instruction of elementary pupils in the lower grades attached to independent high schools. The average number of teachers to a school was 3, as shown in the first column of Table 23, the average number for the North Atlantic Division being 3.8 and for the South Central 2.3.

There were 350,099 secondary students in the public high schools of the United States. A glance at the seventh column of Table 1 will show how those students were distributed by States and by divisions. The North Atlantic had 109,591, the North Central 173,158, the South Atlantic 20,480, the South Central 28,064, and the Western Division 18,806. Ohio stands at the head of the list with 32,597; New York follows with 32,489, and Massachusetts is third with 27,053. Texas leads the South with 9,087 secondary students; Georgia is next with 5,556, and Tennessee follows with 4,766.

Of the 350,099 secondary students 206,022 were females and 144,077 males. The per cent of females was 58.85 and of males 41.15, as shown in Table 7. This proportion is practically maintained in each of the five divisions, the South Atlantic Division alone showing as high a percentage as 42.05 for male students. In Nevada the percentage of male students was 34.16, the lowest shown for any State.

The number of colored secondary students in the public high schools was 4,622, as shown in the tenth column of Table 1. There were 795 in the schools of the North Atlantic Division, 2,046 in the North

Central, 1,020 in the South Atlantic, 715 in the South Central, and 46 in the Western Division.

From the last column of Table 1 it would appear there were 1,264,464 pupils in the elementary departments connected with the public high schools. This number is of little value because the question in relation to pupils below the high-school grades was misunderstood by many of the high-school principals. The result was that in many cases all the children in the village schools were counted. The question was intended to apply to independent high schools only.

Table 2 shows that 48,146 secondary students in the public high schools were preparing for college. This was nearly 14 per cent of the whole number. Of these 26,370 were preparing for classical courses and 21,776 for scientific courses, 7.53 per cent for the former and 6.22 for the latter. In the North Atlantic Division 14.81 per cent of the students were preparing for college, in the North Central 11.79 per cent, in the South Atlantic 13.40 per cent, in the South Central 19.45 per cent, and in the Western Division 17.36 per cent. A comparison of the fourth and fifth columns of Table 7 will show marked variations in the proportions between classical and scientific students in the several divisions. In the North Atlantic, South Atlantic, and South Central divisions the per cent of classical students is greater, while in the North Central and Western divisions the per cent of scientific students is greater. Placing the classical first, the proportions are as follows: 9.07 to 5.74 per cent in the North Atlantic, 10.68 to 2.72 in the South Atlantic, 12.15 to 7.30 in the South Central, 5.56 to 6.23 in the North Central, and 6.29 to 11.07 in the Western Division. This of course indicates that the East and the South lean toward the classical training, while the Northwest and West incline toward the education in the sciences. The contrasts between the numbers in the two courses are still more marked in individual States. In Rhode Island the per cent of students preparing for the college classical course was 22.52, and the per cent preparing for the college scientific course was only 4.17. In South Carolina the corresponding percentages were 22.95 and 6.62. On the other hand, in Minnesota the per cent of classical preparatory students was only 4.89 as against 20.55 per cent of scientific preparatory students.

The number of graduates from the public high schools at the close of the school year 1895 was 42,393, or 12.11 per cent of the whole number of secondary students. The number of male graduates was 15,158 and of female graduates 27,235. The per cent of male graduates to the total number of male students was 10.52, while 13.21 per cent of the female students in attendance were graduated. In the ninth column of Table 2 will be found the number of graduates in each State. The corresponding percentages are found in the sixth column of Table 7. It is noted that in the District of Columbia 17.63 per cent of the secondary students were in the graduating class.

Of the 42,393 students graduating, 11,903 were preparing for college, as may be seen from the twelfth column of Table 2. This number was 28.08 per cent of the total number graduating, as shown in the seventh column of Table 7. The percentages for the several States present strong contrasts when compared. For example, in Mississippi 85.98 per cent of the graduates were college preparatory students, while in Massachusetts the per cent was only 22.94, and in the District of Columbia only 4.50.

The last column of Table 2 shows that there were 5,812 students in the public high schools receiving instruction in military tactics—3,843 in the North Atlantic Division, 375 in the South Atlantic, 172 in the South Central, 1,210 in the North Central, and 212 in the Western Division.

#### STUDENTS AND STUDIES.

The numbers of public high school students pursuing certain studies are given in Tables 3, 4, 5, and 6, and the corresponding percentages in Tables 8 and 9. The four former tables should be considered in connection with the two latter. Tables 3, 4, 5, and 6 show the numbers of students, male and female, in each State studying Latin, Greek, French, German, algebra, geometry, trigonometry, astronomy, physics, chemistry, physical geography, geology, physiology, psychology, rhetoric, and history other than that of the United States.

*Latin.*—Of the 350,099 secondary students in the public high schools, 43.97 per cent studied Latin, 153,950 in all, 60,777 males and 93,173 females. In the North Atlantic Division 42.64 per cent studied this language; in the South Atlantic, 63.33 per cent; in the South Central, 48.48 per cent; in the North Central, 41.55 per cent, and in the Western Division, 46.24 per cent. North Carolina shows the largest percentage, 83.12, and Wisconsin the smallest, 21.61, leaving the Territory of Arizona out of the list. It is somewhat remarkable that the two Northern divisions show the smallest percentages of students pursuing the classic Latin.

*Greek.*—From an inspection of the sixth column of Table 3 it will be seen that 10,859 students in the public high schools studied Greek—6,361 males and 4,498 females. The students in Greek comprised 3.10 per cent of the whole number. In the North Atlantic Division the per cent was 6.15, and in the North Central 1.36. In Rhode Island the per cent was 11.75, in Maine 13.41. From Delaware, West Virginia, Oklahoma, North Dakota, Montana, Wyoming, New Mexico, Arizona, Nevada, Idaho, Washington, and Oregon there were no Greek students reported. Florida reported only 1, South Dakota 2, and Utah 5.

*French.*—The number of students studying French was 22,813, or 6.52 per cent of the whole number. In the North Atlantic Division the per cent was 14.21, in the South Atlantic 9.52, in the South Central 3.03, in the North Central 2.14, and in the Western Division 3.97. The highest

percentage in any State was 36.75, in Massachusetts, and the next 32.79, in Louisiana.

*German.*—The German language was studied by 39,901 students, 15,235 males and 24,666 females. The per cent for the entire United States was 11.40. The percentage for the North Atlantic Division was 13.52, for the South Atlantic 13.06, for the South Central 4.22, for the North Central 10.84, and for the Western Division 13.12. The highest percentages were in the District of Columbia and in Maryland, 29.84 and 29.83, respectively.

*Algebra.*—Of the total 350,099 secondary students, 189,988, or 54.27 per cent, were studying algebra. The male students in algebra numbered 79,524, and the female students 110,464. The South Central Division leads with 66.56 per cent, the South Atlantic is next with 65.99 per cent, the Western Division had 58.88, the North Central 52.78, and the North Atlantic 50.48.

*Geometry.*—More than 25 per cent of the students had geometry as the second mathematical study. There were 36,078 males and 52,624 females, or a total of 88,702. In the North Atlantic Division 25.80 per cent studied geometry, in the South Atlantic 32.38, in the South Central 28.77, in the North Central 22.93, in the Western Division 32; for the whole United States 25.34.

*Trigonometry.*—Only 8,868 students included trigonometry in their courses of study, 4,160 males and 4,708 females. The per cent was 2.53, although in the two Southern divisions the percentages were 7.49 and 6.92.

*Astronomy.*—In the public high schools astronomy is classed as a science study. It was pursued by 16,770 students in 1895, or 4.79 per cent of the whole number.

*Physics.*—The number of students in physics was 79,720, the males numbering 33,450 and the females 46,270. The per cent of students in this branch was 22.77 for the whole country, the two Southern divisions leading with 30.45 and 29.97, respectively.

*Chemistry.*—This branch of science claimed only 32,024 students, or 9.15 per cent of the whole number. The Western Division had 14.22 per cent of its students in chemistry.

*Physical geography.*—The number studying physical geography was 83,642, the males numbering 35,293 and the females 48,349. The percentage to the total number of secondary students was 23.89, the South Central Division leading with 29.78, the Western Division reporting only 15.18 per cent in physical geography.

*Geology.*—Five per cent of the high-school students studied geology, 7,182 males, 10,306 females, a total of 17,488. In the South Central Division the per cent was 7.80, and in the North Atlantic 6.25.

*Physiology.*—The science study claiming the largest number of students was physiology. The number in this branch was 104,862, or 29.95 per cent of the total. The males numbered 44,274 and the

females 60,588. In the South Central Division the per cent was as high as 39.15 and in the Western Division as low as 16.75. In Florida the per cent was 54.40 and in Alabama 52.76. In Vermont the per cent was 15.20 and in Rhode Island 4.42.

*Psychology.*—The number of students studying psychology was 9,606, or 2.74 per cent of the whole number. It is noticeable that the highest per cent, 5.77, was in the South Central Division, and the next highest, 3.29, was in the South Atlantic Division. In Alabama the per cent was 16.97.

*Rhetoric.*—More than 32 per cent of the students studied rhetoric, 45,429 males and 66,776 females, making a total of 112,205. The Western Division was in the lead with a percentage of 43.91, the South Central had 39.04 per cent, the South Atlantic 36.40, the North Central 32.15, and the North Atlantic 27.26.

*History.*—The number of students reading history other than United States history was 120,201, or 34.33 per cent of the whole number. In the Western Division the per cent was 48.90, in the South Atlantic 48.61, in the South Central 42.11, in the North Atlantic 34.89, and the North Central 29.45.

#### EQUIPMENT AND INCOME.

An inspection of Table 10 will enable the reader to form an estimate of the amount of money necessary to keep in operation the 4,712 public high schools of the United States. It is very difficult to collect statistics of school finances. This is particularly true of public high schools for the reason that so many of them are parts of city school systems whose officials do not keep separate accounts of the expenditures for secondary instruction.

The aggregate value of buildings and grounds, etc., is given as \$78,026,394. Only 3,858 of the 4,712 principals furnished figures for this item, and in most cases the figures furnished were only estimates. However, there is reason to believe that \$78,026,394 is a fair valuation of the property of the 3,858 public schools.

The number of public high schools reporting libraries was 3,288, and the aggregate number of volumes reported was 1,838,946. There were 741 of these libraries having more than 500 volumes each, and of these 437 had more than 1,000 volumes each.

Replies were received from only 2,563 of the 4,712 schools in response to the inquiry as to the amounts of appropriations received from State, county, or city. The aggregate amount reported was only \$7,719,199. It is believed that a large part of the \$4,060,262 given in column 11 of Table 10 as "amount received from other sources and unclassified" more properly belongs in column 4.

As shown in the seventh column, 2,849 schools received from tuition and other fees \$1,018,631.

Only 331 schools received an income from productive funds, and the amounts received aggregated \$710,705.

Of the 4,712 schools, only 3,549 reported the total amounts received. These aggregated \$13,508,797. Of this large sum, \$3,696,637 was reported from the North Atlantic Division, \$732,045 from the South Atlantic, \$1,220,688 from the South Central, \$6,863,021 from the North Central, and \$996,406 from the Western Division.

#### PRIVATE HIGH SCHOOLS.

In public and private high schools in 1895 there were 468,446 secondary students. Of these about 25 per cent, or 118,347, were in private high schools and academies. The number of such schools was 2,180, or nearly 32 per cent of the total number of secondary schools.

The statistics of private high schools and academies are summarized in Tables 11 to 22. Tables 11 to 20 correspond in form to Tables 1 to 10 of the public high school summaries, and the two series can be easily compared, column by column.

Table 11 shows that in the 2,180 private high schools there were 8,559 (3,991 males and 4,568 females) teachers instructing secondary students. In the two southern divisions the number of female teachers is not so greatly in excess of the number of male teachers as in the two northern divisions.

In the private high schools there were 57,354 male secondary students and 60,993 female, the per cent of males being 48.46. In the public high schools the percentage of males was only 41.15. In the private high schools there were 113,878 elementary pupils—51,761 males and 62,117 females.

The number of students preparing for college in the private high schools was 32,051. Of these, 20,477 were preparing for the classical course and 11,574 for a scientific course. The per cent of college preparatory students was 27.08, the classical preparatory being 17.30 per cent and the scientific preparatory 9.78 per cent. In the public high schools 13.75 per cent of the secondary students were preparing for college, 7.53 per cent for the classical course, and 6.22 for a scientific course.

The number of graduates from private high schools in 1895 was 11,960, or 10.11 per cent of the whole number. (See Tables 12 and 17.) The number was divided almost equally between the sexes, there being 6,052 male and 5,908 female graduates.

The number of college preparatory students in the graduating classes was 5,733, or 47.93 per cent of the whole number of graduates. Of these college preparatory graduates 3,724 were males and 2,009 females. In the public high schools the per cent of college preparatory students in the graduating classes was 28.08, and largely more than half of the number were females.

A comparison is made in Table 23 between certain public and private high school statistics.

## STUDENTS AND STUDIES.

The numbers of students in the private high schools pursuing certain studies are given in Tables 13, 14, 15, and 16, and the corresponding percentages are given in Tables 18 and 19. These tables, when compared with Tables 3, 4, 5, 6, 8, and 9, present rather marked contrasts between the public and private high schools in regard to certain secondary studies.

In the public high schools 43.97 per cent of the secondary students studied Latin. In the private secondary schools the per cent was 43.14. In the public high school the per cent studying Greek was only 3.15, while in the private high school it was 9.55. In French the per cents were 6.52 for the public and 19.38 for the private high schools. In German the per cents were 11.40 and 16.07; in algebra, 54.27 and 46.88; in geometry, 25.34 and 22.06; in trigonometry, 2.53 and 5.39; in astronomy, 4.79 and 6.69; in physics, 22.77 and 20.32; in chemistry, 9.15 and 9.79; in physical geography, 23.89 and 18.15; in geology, 5 and 7.08; in physiology, 29.95 and 22.34; in psychology, 2.74 and 5.13; in rhetoric, 32.05 and 29.12; in general history, 34.33 and 35.60.

## EQUIPMENT AND INCOME.

The number of private high schools reporting libraries was 1,361, as may be seen from an inspection of Table 20. The aggregate number of volumes in these libraries was 1,498,427.

Of the total number of schools, 1,545 reported the value of property owned. The aggregate, including value of grounds, buildings, and scientific apparatus, was \$51,865,512. This would give to each school reporting an average valuation of property of \$33,570.

Only 315 of the schools are endowed institutions, but the endowments aggregate \$24,729,613, an average of about \$78,500 to a school.

Public funds were received in small amounts by 301 schools, the aggregate reaching only \$157,293.

Only 1,424 schools reported the amounts received from tuition fees. The aggregate was \$6,002,380.

The number of schools having income from productive funds was 338, and the amounts received from this source aggregated \$1,864,054. This sum is more than  $7\frac{1}{2}$  per cent of the aggregate of endowments reported. The rate is probably too high, owing to the fact that 23 schools reporting incomes from productive funds were not reported as having endowments.

Only 1,449 of the 2,180 private high schools answered the question in regard to total amount of income. The aggregate received for support from all sources was \$8,878,218, or about \$6,127 to each school.

Benefactions amounting to \$495,760 were received in 1895 by 140 schools. The North Atlantic Division claimed 51 of these schools and

\$219,077 of the gifts. It may also be noted that of the \$24,729,613, total endowment of private secondary schools, \$20,312,025 is possessed by 165 schools in the North Atlantic Division, and that 21 schools in Pennsylvania have \$12,415,813, or more than half of the entire sum. The endowment of Girard College, \$11,235,113, is included in this sum.

#### DENOMINATIONAL SCHOOLS.

Less than half the private secondary schools are controlled or supported by religious denominations. Of the 2,180 schools reporting to this office, 1,270 are nonsectarian. (See Tables 21 and 22.) The Roman Catholic Church supports 280 schools, having 12,777 secondary students. The Episcopal Church has 119 schools with 5,552 students; the Baptist, 109 schools with 7,424 students; the Presbyterian, 102 schools with 4,654 students; the Methodist Episcopal Church South 72 schools and 7,685 students; the Congregational, 56 schools and 2,882 students; the Friends, 57 schools with 3,851 students; the Methodist, 39 schools with 2,144 students; the Lutheran, 36 schools with 1,908 students. All other religious denominations have 40 schools with 3,564 students.

#### PUBLIC AND PRIVATE SECONDARY SCHOOLS.

To facilitate the study of the statistics of secondary schools, regardless of whether the schools are public or private, Tables 24 to 29 were prepared from the preceding tables, relating separately to public and private high schools.

Table 24 shows that in 1894-95 there were 6,892 secondary or high schools reporting to this office. These schools had 22,681 teachers instructing secondary students. In the schools there were 468,446 secondary students, 201,431 males and 267,015 females. The males constituted 43 per cent and the females 57 per cent of the students in high-school studies. The proportion of male and female students varies greatly in different States, as may be seen by comparing the fifth and seventh columns of Table 24. In several States the per cent of female students is above 60.

Ten per cent of the students, or 46,847, were preparing for the college classical courses and 7.11 per cent, or 33,350, for the college scientific courses. Compare the last column of Table 24 with the second column of Table 25. The third and fourth columns of the latter table show that 80,197 students, or 17.11 per cent of the whole number, were preparing for college.

The number of graduates in 1895 was 54,353, or 11.60 per cent of the whole number of secondary students. The number of college preparatory students in the classes that graduated was 17,636, or 32.44 per cent of the whole number of graduates.

The numbers of students pursuing certain secondary studies are given in Tables 26 to 29. The per cent in each study in each State is also given in the same tables.

Of the 468,446 secondary students there were 205,006, or 43.76 per cent, studying Latin. The per cent was highest in the South Atlantic division, 55.69. In several States of that division more than 60 per cent of the high-school students pursued this study.

The number of secondary students pursuing Greek was 22,159, or only 4.73 per cent of the whole number. The North Atlantic Division had 8.41 per cent. New Hampshire was first in the list, with 14.73 per cent of students in Greek.

French was studied by 45,746 students, or 9.77 per cent of the whole number. In the North Atlantic Division the per cent was 18.77. In Massachusetts the per cent of students in French was 38.02, and the per cent in Louisiana was 46.60. However, the disproportion in numbers was very great, Massachusetts having 12,619 students in French and Louisiana only 1,378.

The German language had 58,921 students in the secondary schools, 12.58 per cent of the whole number. The North Atlantic had 16.48 per cent, the highest for any division, and Maryland had 28.83 per cent, the highest for any State.

Algebra is the study which claims the largest number of students, as will be seen by reference to the first column of Table 27. There were 245,465 students in this branch, or 52.40 per cent of the whole number. The percentages in the two Southern divisions were 58.72 and 58.97, respectively, and in the North Atlantic Division 49.15. In Maryland more than 70 per cent studied algebra.

The number studying geometry was less than half the number in algebra. There were 114,813 students in geometry, 24.51 per cent of the whole number. In the North Central Division the per cent was only 22.54, while in the Western Division it was 29.48.

The study claiming the smallest number of students was trigonometry. Only 15,243, or 3.25 per cent, pursued this branch of mathematics. The two Southern divisions show percentages of 6.28 and 6.88. In Alabama the per cent was 13.67, in Vermont 0.69, and in Minnesota 0.41.

The per cent of students in astronomy was 5.27, the number being 24,690. The largest per cent, 12.60, was claimed by Florida, and the smallest, 0.87, by Delaware.

Physics was studied by 103,768 students, or over 22.15 per cent of the whole number. The State having the largest per cent of students in this branch was Maryland, with 42.65. In Vermont the per cent was 14.81 and in Utah only 8.89.

Chemistry had 43,607 students. This number was 9.31 per cent of all. The Western Division had 13.29 per cent of its students in chemistry, Nevada leading with 32.14 per cent.

The number of students in physical geography was 105,124, or 22.44 per cent of the total. In the North Central Division 24.74 per cent of the students pursued this study. The per cent in South Dakota was

36.18. In the South Atlantic Division the per cent was 23.31, Florida alone having 43.66 per cent of its secondary students in physical geography.

There were 25,866 students in geology, 5.52 per cent of the whole number. The table shows wide variations between the percentages in different States. In Tennessee the per cent was 12.08 and in Maryland only 2.43.

Physiology had a larger number of students than any other science study. The number was 131,304 and the per cent 28.03, as may be seen from Table 29. The per cent for the South Central Division was 31.97 and for the Western Division 18.62. In Arkansas 43.89 per cent of the students studied physiology.

The number of students in psychology was 15,677, the per cent being 3.35. Several States reported no students in this study. In Utah the per cent was 10.66. Oklahoma's 44 students in psychology comprised 20.95 per cent of the whole number of secondary students in that Territory.

Rhetoric was studied by 31.31 per cent of the secondary students, the number pursuing this study being 146,672. The per cent for the Western Division was 40.92 and for the North Atlantic 27.56. The per cent for California was 52.60 and for New York 21.23.

General history, or history other than that of the United States, had 162,336 students, or 34.65 per cent of the total. The Western Division had 46.58 per cent, the South Atlantic 43.48, the South Central 36.71, the North Atlantic 35.51, and the North Central 30.01. The largest per cent for any State was 61.59, for Maryland, and the smallest 17.05, for Utah.

#### SECONDARY STUDENTS.

It was stated in the beginning of this chapter that there were 539,712 secondary students in eight classes of institutions reporting to this office in 1895. Tables 30 and 31 show the distribution of these students according to the class of institution in which they are found as well as their distribution by States and geographical divisions.

The third column of Table 30 shows the grand total of secondary students in public and private institutions, the first column showing that there were 243,151 males, and the second column 296,561 females. The North Atlantic Division had 164,439 of these students, the South Atlantic 49,378, the South Central 66,797, the North Central 229,055, and the Western Division 30,043.

The sixth column of this table summarizes the number of secondary students in public high schools. The distribution of these 350,099 students has been noted in preceding pages.

The ninth column of Table 30 shows that there were 6,024 secondary students in the preparatory departments of public colleges and universities, 4,327 males and 1,697 females. These were distributed among 86 State institutions in 31 States and Territories.

In the public normal schools of 18 States there were 5,247 students of secondary grade, 1,228 males and 4,019 females. The total is given in the twelfth column of Table 30.

The total number of secondary students in public institutions was 361,370, as shown in the last column of the table. Of this total 149,632 were males and 211,738 females.

Table 31 shows the distribution of secondary students in private institutions. In the third column will be found the number in private high schools and academies, 118,347. This summary was noticed at length in preceding pages.

The preparatory departments of private colleges and universities had 43,164 students, 29,538 males and 13,626 females. As will be seen from the sixth column of Table 31, more than one-half of these secondary students were in the North Central Division. Of these Illinois had 4,336, Ohio 4,282, and Missouri 3,191.

In the preparatory departments of colleges for women there were 4,824 secondary students. (See column 7, Table 31, Table 31.)

The private normal schools had 8,589 secondary students, as shown in the tenth column, 4,568 males and 4,021 females. Of these 2,982 were in the North Central Division.

The manual training schools of 11 States had 3,418 students of secondary grade, 2,059 males and 1,359 females. (See column 13, Table 31.)

The total number of secondary students in private institutions was 178,342, as shown in the last column of the table, 93,519 males and 84,823 females. This total was divided among the divisions as follows: North Atlantic, 51,518; South Atlantic, 27,743; South Central, 37,213; North Central, 52,378; Western, 9,490.

#### A STATISTICAL REVIEW.

Following the 31 tables giving statistical summaries of public and private secondary schools for the scholastic year 1894-95, this chapter concludes with a statistical review for the past five years. Thirty-four tables, 32 to 65, review the more important statistical items relating to high schools from 1890-91 to 1894-95. This review was made necessary since certain errors had crept into a few of the summaries in former years, and, moreover, for one or two years important summaries had been omitted entirely. These summaries have been compiled from the original returns and are here presented in a form which will make them valuable for comparison. Thus, it will be seen that for five years the statistics of secondary schools are continuous. The forms of inquiry were similar, and the information appears tabulated for each year in summaries which are uniform. It is true that certain of the tables show wide variations between two years, but these apparent inconsistencies are partially explained in footnotes.

Tables 32 to 48 relate to public high schools. Table 32 shows the number of such schools for each of the five years from 1891 to 1895 for

each State and the number of instructors for each year. Table 33 gives the number of male and female teachers instructing secondary students; 34 gives the number of secondary students and elementary pupils for each year; 35, the secondary students, male and female; 36, the elementary pupils, male and female; 37, the colored secondary students, male and female; 38, the classical and the scientific college preparatory students; 39, the classical preparatory students, male and female; 40, the scientific preparatory students, male and female; 41, the graduates for each year, male and female; 42, the graduates and the college preparatory students in the graduating class each year; 43, the college preparatory graduates, male and female; 44, the number of volumes in the public-school libraries each year; 45, the value of grounds, buildings, and scientific apparatus; 46, amount of aid received from the States, counties, and cities; 47, amounts received from tuition; 48, total income for each year.

Tables 49 to 65 relate to private high schools and academies, and deal with like items and in the same order as above enumerated for public high schools. The tables are readily understood without further explanation.

#### THE ENDOWED ACADEMIES.

The names of the 315 academies and private high schools reporting endowments will be found in the list which follows. The amount of the endowment for each school, as reported to this office in 1895, is given in the following table:

| Institutions and locations.                      | Endowments. | Institutions and locations.                        | Endowments. |
|--|-------------|--|-------------|
| Noble Institute (girls), Anniston, Ala.          | \$10,000    | Hutcheson Collegiate Institute, Whitesburg, Ga.    | \$3,500     |
| Male and Female Academy, Lower Peach Tree, Ala.  | 600         | The College of Idaho, Caldwell, Idaho.             | 2,000       |
| Male and Female Academy, Pisgah, Ala.            | 200         | Southern Collegiate Institute, Albion, Ill.        | 500         |
| Salitpa Academy, Salitpa, Ala.                   | 800         | The Union Academy of Southern Illinois, Anna, Ill. | 50,000      |
| Talladega College, Talladega, Ala.               | 145,000     | Jennings Seminary, Aurora, Ill.                    | 5,000       |
| Male and Female College, Quitman, Ark.           | 1,000       | Geneseo Collegiate Institute, Geneseo, Ill.        | 12,000      |
| Rogers Academy, Rogers, Ark.                     | 150         | Monticello Female Seminary, Godfrey, Ill.          | 20,000      |
| Belmont School, Belmont, Cal.                    | 9,000       | Greenville College, Greenville, Ill.               | 5,000       |
| Jarvis Hall (Military Academy), Denver, Colo.    | 100,000     | Gittings Seminary, La Harpe, Ill.                  | 10,000      |
| Tillotson Academy, Trinidad, Colo.               | 500         | Mendota College, Mendota, Ill.                     | 15,000      |
| Morgan School, Clinton, Conn.                    | 200,000     | Mt. Morris College, Mt. Morris, Ill.               | 10,000      |
| Bacon Academy, Colchester, Conn.                 | 30,000      | Grand Prairie Seminary, Onarga, Ill.               | 13,000      |
| Housatonic Valley Institute, Cornwall, Conn.     | 15,000      | Point Byron Academy, Point Byron, Ill.             | 50,000      |
| Glastonbury Academy, Glastonbury, Conn.          | 25,000      | Concordia College, Springfield, Ill.               | 1,000       |
| The Hotchkiss School, Lakeville, Conn.           | 200,000     | Waterman Hall, Sycamore, Ill.                      | 75,000      |
| Bulkeley School, New London, Conn.               | 65,000      | Toulon Academy, Toulon, Ill.                       | 10,000      |
| Williams Memorial Institute, New London, Conn.   | 125,000     | Vermilion Academy, Vermilion Grove, Ill.           | 20,000      |
| Gilbert School, Winsted, Conn.                   | 500,000     | Friends Bloomingdale Academy, Bloomingdale, Ind.   | 4,000       |
| Woodstock Academy, Woodstock, Conn.              | 11,500      | Borden Institute, Borden, Ind.                     | 5,000       |
| St. Leo Military College, St. Leo, Fla.          | 900         | Howe School, Lima, Ind.                            | 15,000      |
| Atlanta Baptist Seminary, Atlanta, Ga.           | 25,000      | Oakland City College, Oakland City, Ind.           | 20,000      |
| Academy of Richmond County, Augusta, Ga.         | 60,000      | Central Academy, Plainfield, Ind.                  | 1,200       |
| The Payne Institute, Augusta, Ga.                | 25,000      | Sugar Grove Academy, Plainfield, Ind.              | 800         |
| Summerville Academy, Augusta, Ga.                | 70,000      | Spiceland Academy, Spiceland, Ind.                 | 4,000       |
| Walker Baptist Institute, Augusta, Ga.           | 150         | Vincennes University, Vincennes, Ind.              | 59,000      |

## CHAPTER III.

### STATISTICS OF NORMAL SCHOOLS.

A large proportion of the normal schools in the United States, the public as well as the private institutions, maintain various courses of study in addition to the courses designed for the professional training of teachers. Great care has been exercised in collecting the statistics of normal schools to obtain correct returns of the number of students actually pursuing teachers' training courses. The number of students pursuing courses especially organized for teachers in universities and colleges, in academies and high schools, has also been ascertained by special inquiry. A summary of the statistics thus obtained shows that in the scholastic year 1894-95 there were in the United States 80,839 students pursuing training courses for teachers. These students were distributed as follows: In public normal schools, 36,491; in private normal schools, 22,013; in universities and colleges, 6,402; in public high schools, 6,809; in private high schools, 9,124.

The number of graduates from the public normal schools was 5,492 and the number from the private normal schools 3,094. The number graduating from teachers' training courses in other institutions is not known. The public and private normal schools, with 58,504 normal students, sent out 8,586 graduates who had pursued teachers' training courses. The per cent of graduates to the total number of normal students was 14.68. If it be assumed that the percentage of graduates to the number of normal students in other institutions, 22,335, was 14.68, then these colleges, high schools, and academies must have graduated 3,279 normal students. It will thus be seen that the number of trained teachers graduated from the various institutions enumerated must have been about 11,865 for the class of 1895.

Some idea of the growth of normal schools in the past ten years may be gained by an inspection of the following table, which shows the number of schools, instructors, students, and graduates in 1884-85 and in 1894-95:

*Public and private normal schools.*

| Year.        | Public normal schools. |                   |           |                 | Private normal schools. |                   |           |                 |
|--------------|------------------------|-------------------|-----------|-----------------|-------------------------|-------------------|-----------|-----------------|
|              | Schools.               | Instruct-<br>ors. | Students. | Gradu-<br>ates. | Schools.                | Instruct-<br>ors. | Students. | Gradu-<br>ates. |
| 1884-85..... | 131                    | 1,234             | 26,090    | 3,162           | 132                     | 842               | 17,068    | 1,366           |
| 1894-95..... | 155                    | 1,584             | 36,491    | 5,492           | 201                     | 1,059             | 22,013    | 3,094           |

The Education Report for 1884-85 does not show the number of students in teachers' training courses in universities and colleges, public and private high schools. It can be stated as a fact, however, that there has been a large increase in the number of students pursuing such courses in these institutions within the last ten years.

#### PUBLIC NORMAL SCHOOLS.

The statistics of public normal schools will be found summarized in Tables 1 to 6 in this chapter. Table 1 gives the number of schools in each State and the number of teachers employed in the public normal schools of each State. In the 155 schools there were 1,584 teachers instructing normal students, 649 males and 935 females. There were 467 teachers wholly for other departments, 119 males and 348 females. The total number of teachers in the 155 schools was 2,051.

The numbers of students in several courses of study are shown in Table 2. There were 36,491 normal students, 10,353 males and 26,138 females. There were 289 students in business courses, 5,247 in secondary grades and 15,677 in elementary grades. These numbers make a total of 57,704, as shown in the third column of Table 3. There were 1,298 colored normal students included in the third column of Table 2. The last column of Table 3 shows that there were 19,461 pupils in the model schools connected with public normal schools. This number is not included in the grand total summarized in the third column of Table 3. In many instances certain grades in city systems are used as model schools by public normals, but generally the model schools are organized in the secondary and elementary grades which belong to the normal schools.

Table 4 shows the number of graduates from the public normal schools in the class of 1895. As already stated, there were 5,492 normal graduates, 1,013 males and 4,479 females. There were 291 graduates in business courses and 374 in other courses. Of the normal graduates, more than 81 per cent were women. In the North Atlantic Division the female graduates were more than 86 per cent of the total number of normal graduates; in the North Central Division the per cent was 74; in the South Atlantic nearly 85; in the South Central 67, and in the Western Division nearly 90.

The aggregate amount received by the 155 public normal schools from State, county, and city appropriations for support for the year 1894-95 was \$1,917,375, as shown in Table 5. The amount received from tuition and other fees was \$370,849. Nine States received \$58,808 from productive funds. The amounts received from other sources and unclassified aggregated \$362,431. A portion of this sum should be distributed in the three preceding columns of Table 5, but it can not be properly apportioned here on account of the manner in which certain schools reported their income. The total income of the 155 schools for the year 1894-95 was \$2,709,463.

Table 6 shows that 119 public normal schools had libraries, and that these libraries contained 300,776 volumes. The estimated value of these libraries was \$369,333.

It appears also that the value of buildings, grounds, and scientific apparatus was \$14,454,275, and that the value of other property was \$410,347.

The aggregate amount appropriated by States, counties, and cities for buildings and improvements for public normal schools in 1894-95 was \$1,003,933.

#### PRIVATE NORMAL SCHOOLS.

The 201 private normal schools reporting to this office in 1895 had 1,059 teachers instructing normal students, 616 males and 443 females (See Table 7.) There were 900 other teachers, 397 males and 503 females instructing pupils in other departments. The total number of instructors in the 201 schools was 1,959.

Table 8 shows the distribution of students according to four classes or courses. In these private normal schools there were 22,013 normal students proper, 11,442 males and 10,571 females. It will be noted that nearly 65 per cent of these private normal students are in the North Central Division—that is, 14,374 of the 22,013 students. Indiana alone had 4,494 of these students, and Ohio 2,129. Five States of the North Atlantic Division had no private normal schools.

In the 201 private normal schools there were 5,210 students in business courses, 3,547 males and 1,663 females. Other students in grades equivalent to secondary or high-school grades numbered 8,589. In these secondary grades there were 4,568 males and 4,021 females. In the elementary grades there were 18,264 pupils, 8,990 boys and 9,274 girls. The total enrollment in the four departments was 54,076 students, 28,578 males and 25,498 females, as shown in the first three columns of Table 9. This table also shows that there were 1,931 colored students included in the enumeration of normal students in Table 8. In the model schools utilized by the normal schools 3,728 children were reported.

Table 10 shows that there were 3,094 graduates from the normal departments, 1,612 males and 1,482 females. There were 2,015 graduates in business courses and 1,253 in other courses.

Table 11 exhibits the income of private normal schools from various sources. In sixteen States these schools received aid from State, county, or city appropriations aggregating \$57,399. The aggregate received from tuition and other fees, so far as reported, was \$626,768. The amount received from productive funds by schools in sixteen States was \$40,404. The amount received from other sources and unclassified was \$386,095. The incomes of the 201 schools for the year 1894-95, so far as reported, aggregated \$1,110,666.

The value of buildings and other property owned by private normal schools is shown in Table 12. Of the 201 schools 147 were reported as

having libraries. These libraries contained 180,873 volumes of an estimated value of \$148,144. The aggregate value of buildings, grounds, scientific apparatus, etc., was \$5,905,421. The value of endowments and other property reported by schools in twenty States was \$839,243, and the value of benefactions received during the year 1894-95 was \$254,001.

The per cent of male and female students and the per cent of graduates to the number of normal students, for public and for private normal schools in each State may be learned from an inspection of Table 13. In the public normal schools the per cent of male students was only 28.37, while in the private normal schools the per cent of males was 51.98.

#### DISTRIBUTION OF NORMAL STUDENTS.

The number of students pursuing teachers' training courses in other institutions than normal schools is shown in Table 14. In 192 colleges and universities there were 6,402 normal students. In 433 public high schools there were 6,809 normal students, 2,007 males and 4,802 females. In 458 private high schools there were 9,124 such students, 3,900 males and 5,224 females. The total number of normal students in the three classes of institutions was 22,335.

Table 15 recapitulates the totals of preceding tables, exhibiting the number of normal students in each of the five classes of institutions. The last column shows the total number of normal students in the United States as reported to this office to be 80,839.

#### REVIEW OF PUBLIC NORMAL SCHOOL STATISTICS.

The statistics of public normal schools for the past five years are reviewed in Tables 16 to 21. Table 16 shows the number of schools, and the number of teachers employed in the normal departments in each State reported to this office each year from 1891 to 1895. The number of schools increased from 131 in 1891, to 155 in 1895. Table 17 shows the number of normal students and the number of normal graduates each year for five years. Table 18 shows the number of each sex in the normal departments each year. Table 19 exhibits the number of teachers and students in the other departments. Table 20 shows the amounts appropriated by States, counties, and cities for the support of these public normal schools each year. The aggregate in 1890-91 was \$1,285,700, and in 1894-95 it was \$1,917,375. The public appropriations for buildings and improvements for each of the five years are shown in Table 21.

#### NORMAL STUDENTS IN COLLEGES AND UNIVERSITIES.

More than 200 of the colleges and universities of the United States now offer courses of study designed to meet the demand for the professional training of teachers. In 27 of these institutions there are

organized departments of pedagogy maintaining courses of study for teachers leading to degrees.

In 1890 there were 3,414 students in 114 universities and colleges pursuing courses of study designed for the training of teachers. In 1891 the number of such students was 3,978. For the scholastic year 1892-93 there were 5,232 students training as teachers in 155 such institutions. In 1893-94 the number had increased to 5,500 students in 173 universities and colleges. For the year 1894-95 the list of institutions had increased to 192 and the number of normal students to 6,402. In the following table is given a list of universities and colleges which have in the past three years reported students in teachers' training courses. The number of students reported for each year is given. Institutions marked with an asterisk (\*) have departments of pedagogy, but did not in every instance report pedagogical students separately.

*Colleges and universities reporting students in teachers' training courses.*

| Location.                    | Institution.                            | Normal students. |       |       |
|------------------------------|---|------------------|-------|-------|
|                              |   | 1893.            | 1894. | 1895. |
| <i>Alabama.</i>              |   |                  |       |       |
| Blountsville .....           | Blount College .....                    |                  | 17    |       |
| Lafayette .....              | Lafayette College .....                 | 29               | 15    | 9     |
| Selma .....                  | Selma University .....                  | 150              | 44    | 40    |

## DEPARTMENTS OF PEDAGOGY.

The twenty-seven institutions in the preceding list marked with an asterisk (\*) offer professional training to teachers in regularly organized departments of pedagogy. The courses of study usually extend over the four years and lead to degrees equivalent to other college first degrees. In a few instances post-graduate courses are offered. At the head of the department is generally a professor of pedagogy. The subject is usually treated in five or more courses or subdivisions, such as practical pedagogy, school organization and supervision, history of education, theory of education, and educational systems. Seminary work is provided for in nearly all the institutions named. In the following table is given a synopsis of the courses offered in the departments of pedagogy in each of the twenty-seven institutions mentioned. The courses are not in all cases arranged as here indicated, but the synopsis includes all the subjects offered in the departments of pedagogy in these colleges and universities.

*Synopsis of courses in departments of*

| Institution.   | Practical pedagogy.  | School organization and supervision.   | History of education.  |
|--|--|--|--|
| University of California, Berkeley, Cal.                     | Practice of teaching: 3 hours a week are devoted to lectures and text-book; 3 hours to the observation of teaching in schools, second term.  | School supervision: Text-book, supplemented by lectures on the organization, grading, and management of schools, school statistics, and the organization and conduct of high schools, 2 hours per week, first term; visitation of schools, with special reference to observing methods of organization, grading, and management, 3 hours per week, first term. | History of education: Earlier periods to the time of Rousseau; text-book and readings, supplemented by lectures, 3 hours, first term; the latest period, from the time of Rousseau to the present, text-book and readings, 3 hours, second term.   |
| Leland Stanford Junior University, Stanford University, Cal. | Methods of teaching subjects in elementary schools, 2 hours, first semester: This course deals with common school subjects, their efficacy, their relative importance, and their coordination.<br>Methods of teaching subjects in secondary schools, 2 hours, second semester; consists of lectures and lessons on the place of various subjects in a course of liberal study, and dealing with text-books, classroom management, and general questions of method. | School organization and supervision, 2 hours, second semester: A comparative study of the organization and management of schools, with a view to determining the influences—political, social, and pedagogical—that affect the formation, growth, and vitality of schools.   | History of civilization in Europe: Deals with the historical development of man's political, religious, industrial, social, and moral ideals, and his attempts to realize them through education, 2 hours, both semesters.<br>Intellectual development of America: Deals with the successive steps in our intellectual development as shown in our schools, literature, journals, and social and theological movements, 2 hours, both semesters, Rousseau and Pestalozzi, 2 hours.<br>History of pedagogy (Compayre and lectures); history of pedagogy, advanced (Davidson, Laurie, Quick, etc.), first semester.  |
| University of Colorado, Boulder, Colo.                       |  |  |  |
| University of Chicago, Chicago, Ill.                         |  |  | History of education: Pre-Christian education in the Orient; influence of Christianity on educational ideas and practices; Aristotle and Greek education; Quintilian and Roman education; early Christian education; mediaeval schools; the rise of universities; Luther and the Reformers as educators; Comenius, Rousseau, Pestalozzi, Fröbel, Herbart; educational democracy, including the rise and development of the school systems of Germany, England, France, and the United States; the shifting emphasis in educational thought and practice will be carefully examined; study of some important unsettled problems of education, first term, summer quarter. |

*pedagogy in certain universities and colleges.*

| Theory of education.  | Educational systems.   | Seminary, etc.   |
|---|--|--|
| <p>Theory of education: Lectures on recent views of the general theory of education. Criticism of these views and discussion of their bearing upon the practical work of schools, 4 hours, first term.</p> <p>Philosophy of education.</p>  | <p>School systems: Studies on their origin and development, and a comparative view of education in the leading States of Europe and America, 2 hours, second term.</p>             | <p>Seminary for the study of special problems in education, 2 hours, both terms. Graduate seminary for the systematic study of child life. Biological aspects of education, primarily for graduate students.</p>   |
| <p>Study of educational classics, 2 hours, both semesters: A critical and historical study of the works on education by Aescham, Bacon, Milton, Locke, Spencer, and others.</p>   | <p>Comparative study of European school systems, 1 hour, second semester: Lectures and comparative studies on the school systems of England, France, Germany, and Switzerland.</p> | <p>Seminary devoted to particular studies in education, 2 hours, both semesters.</p> <p>Psychology of childhood, 2 hours, both semesters: Deals with the physical, intellectual, and moral development of children; consists of original studies on children, of statistical studies on the development of the senses, emotions, etc., and of studies in the literature of the subject.</p>  |
| <p>Educational psychology (McLellan, Sully, etc.), first semester.</p> <p>General theory of education (Compayre), second semester.</p> <p>Educational masterpieces (Locke's <i>Thoughts on Education</i>, Lange's <i>Apperception</i>, Spencer's <i>Education</i>), second semester.</p> <p>Philosophy of Education (Rosenkranz, Bain, Herbart, etc.), second semester.</p> |  |  |
| <p>Laurie's Institutes of Education. Special topics to be considered are: Education: values; coordination of studies; child study; apperception; interest; ethical and religious element in education; suggested lines of experiment open to teachers to advance educational knowledge and practice, first term, summer quarter.</p>  |  |  |
| <p>General pedagogy: Development of certain phases of German psychological thought and the resulting principles of pedagogy, autumn quarter.</p>  |  |  |
| <p>The psychological and pedagogical principles of Pestalozzi and Herbart, winter quarter.</p>  |  |  |
| <p>Development of English pedagogy, spring quarter.</p>   |  |  |
| <p>General principles of pedagogy, with special reference to American education, summer quarter.</p>  |  | <p>The work of the seminar will be conducted in two sections, each meeting 2 hours per week. In one section the work will be of a theoretical character, embracing in the autumn quarter an introduction to modern German pedagogy, with readings from Pestalozzi's selected works; in the winter quarter, Herbert Spencer's <i>Education</i>, with the portions of the psychology and data of ethics on which it is based, and in the spring quarter, Herbart's metaphysics and psychology as a basis for his pedagogical writings. The work of the other section will take the form of conferences upon practical questions, conducted with the aid of reports, theses, and discussions.</p> |

*Synopsis of courses in departments of pedagogy*

| Institution                                  | Practical pedagogy.   | School organization and supervision.   | History of education.  |
|--|---|--|--|
| Northwestern University, Evanston, Ill.      |   |  | Compayre's History of Education, Quick's Essays on Educational Reformers, Gill's Systems of Education, Boone's Education in the United States, 2 hours.  |
| Indiana University, Bloomington, Ind.        |   |  | First year: Education in Greece, Rome, Alexandria, and the East, especially Palestine; the rise of Christian schools; the reforms of Charlemagne; the confluence of Greek, Roman, Hebrew, Arabic, and Teutonic culture; the rise of universities; the Reformers, daily.<br>Second year: History of education in America. |
| State University of Iowa, Iowa City, Iowa.   | Teaching and governing: Methods of instruction and general schoolroom practice, including sanitation. (5 hours a week, winter).<br>Secondary education: Organization of courses of study and methods of instruction in secondary schools; report of the committee of ten. (3 hours a week, spring.) | School supervision: A study of school management, the art of grading schools, and the art of arranging courses of study, 5 hours a week, spring. Text books: Chapters on School Supervision, Payne; School Supervision, Pickard. | Compayre's History of Pedagogy, Quick's Educational Reformers, 2 hours a week, fall and winter.  |
| University of Kansas, Lawrence, Kans.        | Methods of instruction, half second term, daily.  | School law, first half term, daily; school management, half second term, daily, school supervision, half first term, daily.  | History of education, daily, second term.  |
| Harvard University, Cambridge, Mass.         | Methods of teaching science in elementary and secondary schools: About 10 exercises for each of the following subjects: Physics, chemistry, physical geography, botany, zoology, physiology, mathematics.   | Organization and management of public schools and academies, supervision, courses of study, and instruction, twice a week.   |  |
| Clark University, Worcester, Mass.           | Methods, devices, apparatus, etc., child study, school hygiene.   | Supervision and administration.  | History of education and reforms.  |
| University of Michigan, Ann Arbor, Mich.     | The arts of teaching and governing, methods of instruction and general schoolroom practice, school hygiene, school law, 4 hours, first semester; Compayre's Lectures on Pedagogy.   | General school management, the art of grading and arranging courses of study, the conduct of institutes, etc.; Payne's Chapters on School Supervision, 3 hours, first semester.  | Compayre's History of Education, 3 hours, during the entire year.  |
| University of Minnesota, Minneapolis, Minn.  | Methodology: General arrangements of subject-matter in courses of study; proper orders in the presentation of the several subjects; conduct of recitations. Visitation of schools.  | School government and organization; school hygiene.  | Ancient education; mediæval and modern theories.   |
| University of Mississippi, University, Miss. | Baldwin's Art of School Management: Management of schools, methods of discipline, class tactics, school apparatus, and other appliances.  | Pickard's School Supervision: Organization and management of graded schools; duties of superintendent and  | Compayre's History of Pedagogy, 5 hours per week, first term.  |

| New York University, New York, N. Y.                                   |   | (1) School buildings, grounds, lighting, heating, ventilation, furniture, sanitation, apparatus, and equipment discussed with reference to the best standards and the reasons which determine these; their practical application. (2) Study of the course of instruction, methods of teaching, working directions, grading, management, and administration of a system of schools, 2 hours per week. | History of education: The aim of this course is to trace the development of educational principles and systems, alike in the relation of these to the general intellectual life of successive periods and nations and in their effect on pedagogical practice. Attention is concentrated first on the ideals cherished during the great civilizations of the past, on their expression through leading philosophers and educators, and their gradual realization in school organization and methods. A concise summary of oriental life leads to a consideration of Greek and Roman civilization. The intellectual development of the middle ages is outlined through a sketch of the early Christian schools, of the efforts of Alfred and Charlemagne, of the influence of chivalry and scholasticism, and of the mediæval university. A study of the Renaissance and the Reformation reveals new elements in educational |

## CHAPTER IV.

### STATISTICAL REVIEW OF HIGHER EDUCATION, 1894-95.

---

#### I.—UNIVERSITIES AND COLLEGES.

*Institutions.*—The number of universities and colleges for men and for both sexes from which reports were received at the close of the scholastic year 1894-95 is 481. This number is greater by five than the number of institutions reported the preceding year, the increase being due to the opening of new institutions and to the fact that the Pennsylvania State College, at State College, Pa., which has heretofore been treated as a technological institution, is now included in the table of universities and colleges. The following institutions were suspended during the year 1894-95: Southern Illinois College, Enfield, Ill.; Wichita University, Wichita, Kans.; Western College, Labelle, Mo.; Hopedale Normal College, Hopedale, Ohio, and New Market Polytechnic Institute, Newmarket, Va.

Keuka College, New York; Hillsboro College, Hillsboro, Ohio; Twin Valley College, Germantown, Ohio, and Urbana University, Urbana, Ohio, will hereafter be included among secondary institutions, they having for the time being relinquished college work.

Of the 481 institutions, 77 are located in the North Atlantic Division, 68 in the South Atlantic Division, 87 in the South Central Division, 204 in the North Central Division, and 45 in the Western Division. Only 109 of the institutions are reported as nonsectarian—that is, as not being under the control of any particular religious denomination. The remaining 372 institutions are divided among 28 different denominations, the number of institutions under the control of each denomination being given in Table 1, pp. 153-154.

The number of institutions that admit women to the undergraduate departments is 343, leaving 138 institutions in which a college course is still denied to women. Several of the latter class of institutions have, however, opened the graduate departments to all classes of students. Of the 138 institutions that do not admit women, 58 are under the control of the Roman Catholic Church, which has not, so far as known, opened any of its higher institutions to both sexes. The average number of college students to each institution for men only is 163, while the average number for coeducational institutions is 119. In

this connection it may be well to state that some of the larger Eastern universities, like Yale, Harvard, Columbia, and Princeton, have not yet opened their undergraduate departments to women. Among the institutions that have lately become coeducational are Furman University, Greenville, S. C., which was opened to women in the fall of 1893; Beloit College, Beloit, Wis., whose collegiate department was opened to women on September 17, 1895, and Hiwassee College, Tennessee, which was opened to women in 1894.

The number of institutions that have been opened for instruction in the several decades from 1638 to 1895 is given in Table 3, p. 156. From this table we find that 49 institutions have been opened since the year 1890.

*Professors and instructors.*—The total number of professors and instructors reported by the 481 institutions is 11,582, of which number 10,040 are men and 1,542 women. The proportion of male and female teachers in the several departments by geographical divisions is as follows:

| Division.                   | Preparatory departments. |                          | Collegiate departments.  |                          | Professional departments. |                         | Total number.            |                          |
|-----------------------------|--------------------------|--------------------------|--------------------------|--------------------------|---------------------------|-------------------------|--------------------------|--------------------------|
|                             | Male.                    | Female.                  | Male.                    | Female.                  | Male.                     | Female.                 | Male.                    | Female.                  |

| North Central Division ...  | 69.0                     | 31.0                     | 85.5                     | 14.5                     | 97.8                      | 2.2                     | 82.0                     | 18.0                     |
| Western Division.....       | 68.8                     | 31.2                     | 85.0                     | 15.0                     | 99.1                      | .9                      | 84.1                     | 15.9                     |

The average number of instructors per institution by geographical divisions is as follows: North Atlantic Division, 41.8; South Atlantic Division, 17.1; South Central Division, 15.2; North Central Division, 23.5; Western Division, 24.1; and for the entire country, 24.1.

*Students.*—The total number of students in all departments of the 481 institutions was 149,939, divided as follows: Preparatory departments, 30.8 per cent; collegiate departments, 42.3 per cent; graduate departments, 2.9 per cent; professional departments, 15.7 per cent, and other departments, 8.3 per cent. The classification of students by sex and color in the several departments by geographical divisions was reported as follows:

#### 1. Preparatory departments.

| Division.                    | Male.            | Female.          | White.           | Colored.         |
|------------------------------|------------------|------------------|------------------|------------------|
|                              | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> |
| United States.....           | 68.3             | 31.7             | 92.5             | 7.5              |
| North Atlantic Division..... | 89.4             | 10.6             | 99.9             | .1               |
| South Atlantic Division..... | 71.6             | 28.4             | 69.6             | 30.4             |
| South Central Division.....  | 63.3             | 36.7             | 78.2             | 21.8             |
| North Central Division.....  | 64.5             | 35.5             | 99.3             | .7               |
| Western Division.....        | 63.5             | 36.5             | 99.9             | .1               |

## 2. Collegiate departments.

| Division.                    | Male.            | Female.          | White.           | Colored.         |

| Western Division.....        | 66.8 | 33.2 | 100.0 | 0  |

## 4. Professional departments.

|                              |      |      |       |      |
|------------------------------|------|------|-------|------|
| United States.....           | 96.5 | 3.5  | 97.1  | 2.9  |
| North Atlantic Division..... | 97.4 | 2.6  | 99.3  | .7   |
| South Atlantic Division..... | 98.2 | 1.8  | 85.1  | 14.9 |
| South Central Division.....  | 98.6 | 1.4  | 91.1  | 8.9  |
| North Central Division.....  | 95.8 | 4.2  | 99.8  | .2   |
| Western Division.....        | 89.5 | 10.5 | 100.0 | 0    |

## 5. Students in all departments.

|                              |      |      |       |      |
|------------------------------|------|------|-------|------|
| United States.....           | 75.0 | 25.0 | 95.6  | 4.4  |
| North Atlantic Division..... | 90.9 | 9.1  | 99.4  | .6   |
| South Atlantic Division..... | 80.4 | 19.6 | 79.3  | 20.7 |
| South Central Division.....  | 71.3 | 28.7 | 86.5  | 13.5 |
| North Central Division.....  | 68.3 | 31.7 | 99.4  | .6   |
| Western Division.....        | 65.0 | 35.0 | 100.0 | 0    |

Of the 63,402 students reported as being in the collegiate departments, only 48,324, or 76.2 per cent, were reported in courses leading to a first or bachelor's degree. A number of the universities and colleges of the country maintain pedagogical and business departments. There were enrolled in 1894-95 in such institutions 5,316 pedagogical students and 5,175 commercial students.

*Degrees.*—The number of degrees conferred during the scholastic year was 9,972, excluding honorary degrees. Of the total number, 8,259 were conferred on men and 1,713 on women. The number of A. B. degrees conferred was 4,812, or nearly one-half of the entire number. The number of Ph. D. degrees conferred was 232, of which number 19 were received by women. The number and kind of degrees conferred on men and on women by the institutions of the several States and Territories is given in Tables 7 and 8, pp. 164-166.

The number of honorary degrees conferred was 895, of which number 626 were doctorates. The number of persons who received the D. D. degree was 345, while 207 received the LL. D. degree.

*Property.*—The value of the entire equipment of the institutions is given as \$232,195,461, of which amount \$102,574,808 are reported as permanent endowment funds. The proportion of property held by the institutions of the several divisions is as follows:

| Division.                    | Institutions.    | Fellowships.     | Scholarships.    | Libraries.       | Apparatus.       | Grounds and buildings. | Productive funds. |
|------------------------------|------------------|------------------|------------------|------------------|------------------|------------------------|-------------------|
|                              | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i>       | <i>Per cent.</i>  |
| North Atlantic Division..... | 16.0             | 42.9             | 48.7             | 45.4             | 48.2             | 38.7                   | 55.1              |
| South Atlantic Division..... | 14.1             | 9.7              | 10.3             | 10.9             | 7.9              | 10.2                   | 7.5               |
| South Central Division.....  | 18.1             | 6.8              | 16.9             | 6.6              | 5.8              | 8.1                    | 6.8               |
| North Central Division.....  | 42.4             | 38.5             | 22.6             | 32.2             | 32.1             | 31.5                   | 27.0              |
| Western Division.....        | 9.4              | 2.1              | 1.5              | 4.9              | 6.0              | 11.5                   | 3.6               |

From the above tabular statement we find that while the North Atlantic Division contains but 16 per cent of the entire number of institutions, these institutions have 42.9 per cent of the number of fellowships, 48.7 per cent of the scholarships, 45.4 per cent of the volumes in libraries, 48.2 per cent of the value of apparatus, 38.7 per cent of the value of buildings and grounds, and 55.1 per cent of all the productive funds. For the amount or value of property held by any individual institution, reference should be made to the detailed statistical tables in volume 2.

*Benefactions.*—The entire amount of benefactions reported by the several institutions as having been received during the year is \$5,350,963. This amount is less by nearly four million dollars than the amount received by this class of institutions during the preceding year. The institutions receiving the largest amounts of money were the University of Chicago, \$800,000; Columbia College, \$428,484; and the University of Pennsylvania, \$411,479.

*Income.*—The total income reported by the universities and colleges was \$16,783,638, of which amount 37.8 per cent was derived from students' fees, 31.7 per cent from endowments, 17.6 per cent from municipal, State, and national appropriations, and 12.9 per cent from miscellaneous sources. The institutions in the North Central Division received 58.1 per cent of all State appropriations. The proportion of income derived from the various sources by the institutions of the several divisions is as follows:

| Division.                     | Tuition fees.    | Productive funds. | State or municipal appropriations. | United States Government. | Other sources.   |
|-------------------------------|------------------|-------------------|------------------------------------|---------------------------|------------------|

## II.—COLLEGES FOR WOMEN.

## DIVISION A.

*Institutions.*—The total number of colleges for women reporting to this office for the year 1894-95 is 163, of which number 54 are reported as nonsectarian—that is, as not being under the control of any particular religious denomination—while the remaining 109 are divided among

12 different religious denominations. The number of institutions in Division A has been reduced to 15 owing to the suspension of Rutgers Female College, New York City.

*Professors and instructors.*—The entire number of professors and instructors reported by the 15 institutions is 593, of which number 480, or 95.4 per cent, are in the regular college departments and but 30, or 6 per cent, in preparatory departments. Ten of the 15 institutions do not maintain preparatory departments. Of the total number of instructors 235, or 56.7 per cent, are women and 218, or 43.3 per cent, are men.

*Students.*—The total number of students enrolled in these institutions was 4,097. In the college departments there were 3,536, or 86.3 per cent; in the preparatory departments there were 157, or 3.8 per cent, and 137, or 3.3 per cent, were enrolled in the graduate departments.

Of the total number of students reported as pursuing courses leading to degrees 2,431, or 77.5 per cent, were in courses leading to the A. B. degree; 596, or 19 per cent, to the B. L. degree, and 111, or 3.5 per cent, to the B. S. degree. Twenty-seven students were reported in pedagogical courses.

*Degrees.*—The number of degrees conferred by the 15 institutions was 564, of which number 492 were A. B. degrees, 30 B. L., 25 B. S., 15 A. M., and 2 Ph. D. No honorary degrees were conferred.

*Property.*—The total value of all property reported is \$10,642,805. The proportion held by the institutions in the several geographical divisions is as follows:

| Division.                    | Institutions.    | Fellowships.     | Scholarships.    | Libraries.       | Apparatus.       | Grounds and buildings. | Productive funds. |

| Western Division.....        | 6.7              | .0               | 5.4              | 2.3              | 1.5              | 7.1                    | 1.8               |

*Income.*—The total income reported by these institutions was \$1,181,795, of which amount 65.4 per cent was derived from tuition fees, 17.7 per cent from endowment funds, and 16.9 per cent from miscellaneous sources. None of the institutions of this class receive aid from either the State or municipality.

*Benefactions.*—The amount of benefactions received during the year was \$407,088, of which amount \$272,124 was received by the institutions of the North Atlantic Division.

#### DIVISION B.

*Institutions.*—The number of institutions included in this class of schools for the year 1894-95 was 148, which is 2 less than were reported in the preceding year. During the year this office was notified of the suspension of the following institutions: Huntsville Female Seminary,

Huntsville, Ala.; Santa Rosa Ladies' College, Santa Rosa, Cal.; Stuart Female College, Shelbyville, Ky.; Corinth Female College, Corinth, Miss., and Pennsylvania Female College, Collegeville, Pa. Huntsville Female College, Huntsville, Ala., has been removed to Gadsden, Ala., and named Jones College for Young Ladies. Southern Female College, Lagrange, Ga., has been removed to Manchester, Ga.

*Professors and instructors.*—The total number of professors and instructors was reported as 1,922, or an average of 13 instructors per institution. The number of male instructors was 405.

*Students.*—The entire number of students was 20,096, or an average of 136 students per institution. Of the total number, 10,513, or 52.3 per cent, were reported as collegiate students. Only 5,090, or 48.4 per cent, of the students reported in collegiate departments were reported as pursuing courses of study leading to a degree. The number of students that were reported as having graduated during the year was 1,618.

*Degrees.*—There were conferred at the close of the year by the institutions in Division B 1,120 degrees, of which number 369 were M. E. L. degrees, 403 A. B., 104 B. S., 70 A. M., 18 M. L. A., 3 L. A., 4 L. S., 123 B. Mus., and 26 B. Painting. It will thus be seen that nearly 500 of the students who were graduated did not receive degrees.

*Property.*—The total value of the property owned by the 148 institutions is \$10,449,952, of which amount \$883,952 are reported as endowment funds. The balance is invested in grounds, buildings, libraries, and apparatus. The proportion of property held by the institutions of the several geographical divisions is as follows:

| Division.                     | Institutions.    | Libraries.       | Apparatus.       | Grounds and buildings. | Productive funds. |
|-------------------------------|------------------|------------------|------------------|------------------------|-------------------|
|                               | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i>       | <i>Per cent.</i>  |
| North Atlantic Division ..... | 9.5              | 29.0             | 24.8             | 14.2                   | 27.0              |
| South Atlantic Division ..... | 32.4             | 29.0             | 21.3             | 31.8                   | 14.7              |

## III.—SCHOOLS OF TECHNOLOGY.

*Institutions.*—Under the head of schools of technology are included only independent schools, the statistics of technological departments of universities and colleges being included in the statistics of the institutions with which they are connected. Of the 51 institutions included 31 are colleges of agriculture and the mechanic arts endowed by the acts of Congress of July 2, 1862, and August 30, 1890.

*Professors and instructors.*—The total number of professors and instructors reported by these institutions was 1,217, of which number 1,130, or 92.9 per cent, taught in the regular collegiate departments. The number of female instructors is very small, being but 92, or 7.6 per cent of the total number. The proportion of instructors in the several departments as compared with the proportion of institutions is as follows:

| Division.                    | Institutions.    | Preparatory instructors. | College instructors. | Total number of instructors. |
|------------------------------|------------------|--------------------------|----------------------|------------------------------|
|                              | <i>Per cent.</i> | <i>Per cent.</i>         | <i>Per cent.</i>     | <i>Per cent.</i>             |
| North Atlantic Division..... | 25.5             | 9.2                      | 37.1                 | 35.5                         |
| South Atlantic Division..... | 23.5             | 11.3                     | 17.5                 | 17.2                         |
| South Central Division.....  | 13.7             | 28.4                     | 11.0                 | 13.4                         |
| North Central Division.....  | 21.6             | 39.0                     | 25.4                 | 24.0                         |
| Western Division.....        | 15.7             | 12.1                     | 9.0                  | 9.9                          |

The average number of instructors per institution in the several geographical divisions is as follows: North Atlantic Division, 33; South Atlantic Division, 17; South Central Division, 23; North Central Division, 27; Western Division, 15; while for the entire number of institutions the average is 24.

*Students.*—The total number of students enrolled in the schools of technology was 13,896, of which number 1,865 were women. The proportion of students, by sex, in the various departments of the institutions of the several geographical divisions was as follows:

| Division.                  | Preparatory departments. |                  | Collegiate departments. |                  | Graduate departments. |                  | Total number.    |                  |
|----------------------------|--------------------------|------------------|-------------------------|------------------|-----------------------|------------------|------------------|------------------|
|                            | Male.                    | Female.          | Male.                   | Female.          | Male.                 | Female.          | Male.            | Female.          |
|                            | <i>Per cent.</i>         | <i>Per cent.</i> | <i>Per cent.</i>        | <i>Per cent.</i> | <i>Per cent.</i>      | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> |
| United States.....         | 78.3                     | 21.7             | 89.8                    | 10.2             | 81.0                  | 19.0             | 86.6             | 13.4             |
| North Atlantic Division... | 100.0                    | 0                | 96.1                    | 3.9              | 98.3                  | 1.7              | 96.4             | 3.6              |
| South Atlantic Division... | 85.1                     | 14.9             | 97.5                    | 2.5              | 100.0                 | 0                | 94.5             | 5.5              |
| South Central Division.... | 79.6                     | 20.4             | 88.8                    | 11.2             | 81.6                  | 18.4             | 83.8             | 16.2             |
| North Central Division.... | 70.4                     | 29.6             | 82.9                    | 17.1             | 65.4                  | 34.6             | 80.2             | 19.8             |
| Western Division.....      | 67.3                     | 32.7             | 69.5                    | 30.5             | 80.0                  | 20.0             | 68.5             | 31.5             |

The proportion of students in the several departments compared with the proportion of institutions is as follows:

| Division.                     | Institutions.    | Preparatory students. | Collegiate students. | Graduate students. | Total number of students. |
|-------------------------------|------------------|-----------------------|----------------------|--------------------|---------------------------|
|                               | <i>Per cent.</i> | <i>Per cent.</i>      | <i>Per cent.</i>     | <i>Per cent.</i>   | <i>Per cent.</i>          |
| North Atlantic Division ..... | 25.5             | 10.0                  | 34.4                 | 23.7               | 28.2                      |
| South Atlantic Division ..... | 23.5             | 18.8                  | 18.3                 | 13.1               | 17.4                      |
| South Central Division .....  | 13.7             | 31.3                  | 12.7                 | 15.0               | 18.5                      |
| North Central Division .....  | 21.6             | 16.8                  | 26.6                 | 42.3               | 24.6                      |
| Western Division .....        | 15.7             | 23.1                  | 8.0                  | 5.9                | 11.3                      |

*Degrees.*—The total number of degrees conferred by the schools of technology was 1,093, of which number 105 were conferred on women. Four of the institutions conferred 19 A. B. degrees. The large number of B. S. degrees, 508, is undoubtedly due to the fact that this degree is given in a number of institutions on the completion of the various technical courses, as in the Massachusetts Institute of Technology, Colorado Agricultural College, etc. The degree of bachelor of household economy is conferred by but one institution, the Oregon State Agricultural College.

Four of the institutions conferred honorary degrees. The name and number of each degree conferred was as follows: 1 E. E.; 1 C. E.; 1 Sc. D.; 2 Ph. M.; 1 M. S.; 1 A. M.; 1 D. D., and 2 LL. D.

*Property.*—The value of all property held by schools of technology is \$29,132,205, of which amount \$13,609,529 are reported as productive endowment funds. The proportion of property held by the institutions in the several divisions, compared with the proportion of institutions, is as follows:

| Division.                     | Institutions.    | Libraries.       | Apparatus.       | Grounds and buildings. | Productive funds. |
|-------------------------------|------------------|------------------|------------------|------------------------|-------------------|
|                               | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i>       | <i>Per cent.</i>  |
| North Atlantic Division ..... | 25.5             | 53.9             | 33.8             | 49.2                   | 40.9              |
| South Atlantic Division ..... | 23.5             | 13.5             | 6.0              | 13.2                   | 6.0               |
| South Central Division .....  | 13.7             | 7.1              | 8.3              | 10.5                   | 7.3               |
| North Central Division .....  | 21.6             | 21.0             | 44.6             | 21.3                   | 44.8              |
| Western Division .....        | 15.7             | 4.5              | 7.3              | 5.8                    | 1.0               |

*Benefactions.*—The total amount of benefactions reported was \$21,530. The small amount of money given to this class of institutions is undoubtedly due to the fact that very many of them are State institutions and do not appeal to any particular class of individuals, as is the case with institutions under sectarian control. The gifts of the people as a whole have been quite considerable, as will be seen by an examination of the column in Table 5, devoted to State or municipal appropriations, given to these institutions by the people through their representatives in the several State and Territorial legislatures.

*Income.*—The total income of the 51 institutions was \$3,965,593, of which amount \$1,671,828 were appropriated by the General Government and \$880,198 were granted by the several States and Territories. The receipts from tuition fees in this class of institutions are comparatively small, the amount received from this source being but \$524,158. The average income of the institutions is \$77,757. The proportion of income derived from the various sources by the institutions of the several divisions is as follows:

| Division.                    | Tuition fees.    | Productive funds. | State or municipal appropriations. | United States Government. | Other sources.   |
|------------------------------|------------------|-------------------|------------------------------------|---------------------------|------------------|

## COMPARATIVE STATISTICS OF HIGHER EDUCATION (1890-1895).

## I.—UNIVERSITIES AND COLLEGES.

In the following pages will be found 19 tables giving the statistics concerning the principal items collected by this Bureau from the universities and colleges during the five years from 1890-91 to 1894-95, both inclusive. In the year 1890-91 statistics concerning the financial condition of these institutions were not collected, so that in the tables devoted to finances the statistics for 1889-90 are used. In the preparation of these tables it was found that there existed some incongruities in the statistics as reported from year to year, especially in the items concerning the value of the material equipment and in the amount of productive funds. These differences were due to the fact that some of

the reports were made in successive years by different persons who placed different estimates on the value of buildings, etc. In other cases the differences were due to depreciation in the value of real estate and in stocks held by the various institutions. An attempt was made to correct all incongruities due to varying estimates by examining and comparing the reports of the several institutions for a series of years, and this has resulted in obtaining statistics which more truly represent the actual condition of these institutions. It should be borne in mind that it has been necessary to change the figures of individual institutions and that the summaries as given in the following pages will differ in some respects from the summaries as included in the several reports from 1890-91 to 1893-94.

The number of institutions was increased from 430 in 1890-91 to 481 in 1894-95. The rate of increase in some of the principal items concerning higher education is given in the following summarized statement:

| Division.                  | Institu-<br>tions. | Pro-<br>fessors. | Stu-<br>dents.   | Libra-<br>ries.  | Appa-<br>ratus.  | Grounds<br>and<br>build-<br>ings. | Produc-<br>tive<br>funds. | Income.          |
|----------------------------|--------------------|------------------|------------------|------------------|------------------|-----------------------------------|---------------------------|------------------|
|                            | <i>Per cent.</i>   | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i>                  | <i>Per cent.</i>          | <i>Per cent.</i> |
| United States.....         | 11.9               | 36.7             | 20.3             | 35.6             | 49.8             | 67.2                              | 32.6                      | 53.0             |
| North Atlantic Division... | 5.5                | 33.3             | 27.3             | 25.6             | 31.0             | 69.9                              | 32.4                      | 45.1             |
| South Atlantic Division... | 21.4               | 36.0             | 22.8             | 27.3             | 21.7             | 70.9                              | 20.7                      | 58.7             |
| South Central Division...  | 14.5               | 25.9             | 5.2              | 25.3             | 58.2             | 49.2                              | 12.8                      | 27.2             |
| North Central Division.... | 5.7                | 35.3             | 17.0             | 52.3             | 90.2             | 49.0                              | 43.5                      | 55.5             |
| Western Division.....      | 40.6               | 77.9             | 57.4             | 86.3             | 106.6            | 154.3                             | 31.4                      | 144.1            |

This statement shows that the largest per cent of increase in all the items included except productive funds has been in the Western Division, where the number of institutions was increased from 32 in 1890-91 to 45 in 1894-95. The establishment of the Leland Stanford Junior University was one of the principal causes of the large per cent of increase in this division, but had no effect upon the productive funds, as its endowment is still retained under the sole management and control of Mrs. Stanford. The greatest per cent in increase of productive funds is found in the North Central Division. This division is the home of the University of Chicago, which was opened for instruction in 1892-93 and has been liberally provided with endowment funds.

The average number of students per institution during the several years under consideration was as follows:

*Average number of students per institution.*

| Division.                    | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|------------------------------|----------|----------|----------|----------|----------|
| United States.....           | 290      | 302      | 311      | 302      | 312      |
| North Atlantic Division..... | 381      | 395      | 413      | 443      | 460      |
| South Atlantic Division..... | 220      | 230      | 228      | 220      | 222      |
| South Central Division.....  | 261      | 275      | 269      | 244      | 240      |
| North Central Division.....  | 299      | 317      | 326      | 314      | 331      |
| Western Division.....        | 217      | 192      | 225      | 227      | 243      |

In obtaining the above averages, all classes of students—preparatory, collegiate, graduate, professional, normal, music, etc.—were included. In the following tabular statement the average number of undergraduate college students per institution is given:

*Average number of college students per institution.*

| Division.                     | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|----------|
| United States .....           | 111      | 119      | 123      | 126      | 132      |
| North Atlantic Division ..... | 193      | 222      | 231      | 249      | 253      |
| South Atlantic Division ..... | 89       | 94       | 90       | 89       | 92       |
| South Central Division .....  | 102      | 97       | 88       | 95       | 99       |
| North Central Division .....  | 98       | 103      | 111      | 113      | 120      |
| Western Division .....        | 53       | 67       | 87       | 89       | 103      |

From this table it will be seen that the North Atlantic Division has more than twice the average number of students per institution than shown by either of the other geographical divisions; also that the number of students per institution has gradually increased in the North Atlantic, North Central, and Western divisions, while in the South Atlantic and South Central divisions the average number has varied very slightly.

The average number of instructors per institution in the several divisions was as follows:

*Average number of instructors per institution.*

| Division.                     | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|----------|
| United States .....           | 20       | 21       | 23       | 23       | 24       |
| North Atlantic Division ..... | 33       | 33       | 37       | 40       | 42       |
| South Atlantic Division ..... | 15       | 17       | 19       | 17       | 17       |
| South Central Division .....  | 14       | 15       | 15       | 14       | 15       |
| North Central Division .....  | 18       | 20       | 21       | 21       | 23       |
| Western Division .....        | 19       | 19       | 22       | 23       | 24       |

Taking into consideration only the instructors in the regular collegiate departments, it is found that the average number of such instructors per institution was as follows:

*Average number of instructors in collegiate departments.*

| Division.                     | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|----------|
| United States .....           | 11       | 12       | 13       | 13       | 14       |
| North Atlantic Division ..... | 18       | 20       | 22       | 24       | 25       |
| South Atlantic Division ..... | 10       | 10       | 11       | 10       | 11       |
| South Central Division .....  | 8        | 8        | 8        | 8        | 8        |
| North Central Division .....  | 10       | 11       | 11       | 13       | 13       |
| Western Division .....        | 9        | 10       | 11       | 12       | 13       |

Here it is observed that the average number of collegiate instructors per institution increased from 11 in 1890-91 to 14 in 1894-95. In the North Atlantic, North Central, and Western divisions there has

been a marked advance in this respect, while in the South Atlantic Division the average number has been increased by 1, and in the South Central Division there has been no change, the average number remaining the same.

During the past five years there has been very little variation in the number of college students to each instructor, as will be seen by the following statement:

*Average number of college students to each instructor.*

| Division.                    | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|------------------------------|----------|----------|----------|----------|----------|
| United States.....           | 10       | 10       | 10       | 10       | 10       |
| North Atlantic Division..... | 11       | 11       | 11       | 11       | 10       |
| South Atlantic Division..... | 9        | 9        | 8        | 9        | 9        |
| South Central Division.....  | 13       | 12       | 11       | 12       | 12       |
| North Central Division.....  | 10       | 10       | 10       | 9        | 9        |
| Western Division.....        | 7        | 7        | 8        | 7        | 8        |

The Western Division comprises within its borders many of the newer States, in which new institutions have been established within the past ten years. These institutions, owing to the fact that there are few preparatory schools in some of the newer States which fit students for college work, have but few students in college classes, the large majority of them being in preparatory classes. This fact tends to lower the average number of students per instructor in this division.

As stated before, statistics concerning financial matters were not collected in the year 1890-91. The average annual income of universities and colleges for the four years from 1891-92 to 1894-95 was as follows:

*Average annual income.*

| Division.                    | 1891-92.  | 1892-93.  | 1893-94.  | 1894-95.  |
|------------------------------|-----------|-----------|-----------|-----------|
| United States.....           | \$31, 975 | \$32, 375 | \$32, 806 | \$34, 893 |
| North Atlantic Division..... | 73, 198   | 75, 149   | 84, 836   | 88, 008   |
| South Atlantic Division..... | 22, 577   | 23, 868   | 20, 128   | 21, 491   |
| South Central Division.....  | 16, 904   | 15, 208   | 14, 157   | 14, 834   |
| North Central Division.....  | 24, 451   | 24, 569   | 26, 102   | 29, 311   |
| Western Division.....        | 31, 019   | 33, 159   | 29, 218   | 28, 349   |

Here it is noticed that while the increase in the average income of institutions for the entire country was but \$2,918, the increase in the North Atlantic Division was nearly \$15,000. The only other division that shows an increase is the North Central Division, where the increase is \$4,860 per institution.

The statistics, by States and Territories, concerning universities and colleges for the years 1890-91 to 1894-95 are given in the following pages:

TABLE 1.—*Number of universities and colleges and the number of students in attendance from 1890-91 to 1894-95.*

| State or Territory.          | Number of institutions. |          |          |          |          | Total number of students. |          |          |          |          |

a Estimated.

## II.—COLLEGES FOR WOMEN.

The statistics concerning colleges for women from the year 1890-91 to 1894-95, as reported to this office, are given on the following pages. An examination of these statistics will show that the figures vary considerably from year to year. This is especially noticeable in the number of institutions reported and included in this classification. It will be noticed that in 1890-91 the number of institutions included was 167,

while in 1891-92 the number was but 158, and in 1892-93 it was still further reduced to 142. This decrease in numbers may be traced to several causes, among which may be mentioned the following: (1) Each year a number of these institutions are either temporarily suspended or permanently closed. (2) Some institutions abandon collegiate work and devote themselves exclusively to secondary work. (3) In several cases institutions have become parts of the public-school systems of the cities or towns in which they are located.

It will be observed that the number of institutions was increased from 142 in 1892-93 to 166 in 1893-94, and again reduced to 163 in 1894-95.

In 1894 a circular letter was sent to all county superintendents of schools, asking them to furnish a list of all educational institutions in their respective counties. In this way a number of new institutions were added to the list of colleges for women, which accounts for the increase of institutions for the year 1893-94. During the scholastic year 1894-95 the office was informed of the suspension of 7 colleges for women. This decrease was counteracted in a measure by the establishment of new institutions, so that the net decrease for the year is but 3.

The average number of professors and instructors to each institution for the several years, as well as the number of students per institution, are given in the following tabular statements:

*Average number of instructors per institution.*

| Division.                    | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |

| North Atlantic Division..... | 24       | 25       | 26       | 26       | 23       |
| South Atlantic Division..... | 12       | 12       | 13       | 13       | 13       |
| South Central Division.....  | 10       | 10       | 11       | 12       | 11       |
| North Central Division.....  | 12       | 13       | 14       | 14       | 14       |
| Western Division.....        | 17       | 18       | 21       | 18       | 18       |

*Average number of students per institution.*

| Division.                    | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|------------------------------|----------|----------|----------|----------|----------|
| United States .....          | 150      | 156      | 160      | 143      | 148      |
| North Atlantic Division..... | 202      | 222      | 229      | 213      | 246      |
| South Atlantic Division..... | 141      | 145      | 152      | 133      | 138      |
| South Central Division.....  | 153      | 153      | 146      | 133      | 135      |
| North Central Division.....  | 116      | 130      | 141      | 122      | 120      |
| Western Division.....        | 109      | 107      | 104      | 95       | 84       |

*Average number of college students per institution.*

| Division.                    | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|------------------------------|----------|----------|----------|----------|----------|
| United States .....          | 72       | 78       | 85       | 83       | 86       |
| North Atlantic Division..... | 103      | 124      | 150      | 151      | 166      |
| South Atlantic Division..... | 73       | 80       | 90       | 82       | 92       |
| South Central Division.....  | 72       | 79       | 68       | 71       | 66       |
| North Central Division.....  | 47       | 44       | 50       | 59       | 59       |
| Western Division.....        | 10       | 9        | 14       | 11       | 7        |

From these tabular statements it is observed that the North Atlantic Division has the largest average number of students per institution as well as the largest average number of professors and instructors. These averages have been increasing gradually during the past five years. In all the other divisions the average number of students has varied from year to year.

Some of the institutions of this class do not possess libraries of their own, the deficiency in this respect being covered in a measure by the private libraries owned by the presidents or principals of the several institutions. The average number of volumes in the libraries of the institutions in the several geographical divisions was as follows:

*Average number of volumes in libraries.*

| Division.                     | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|----------|
| United States .....           | 1,935    | 2,146    | 2,369    | 2,300    | 2,690    |
| North Atlantic Division ..... | 6,054    | 6,113    | 6,529    | 6,647    | 7,498    |
| South Atlantic Division ..... | 933      | 1,144    | 1,104    | 1,200    | 1,536    |
| South Central Division .....  | 1,078    | 925      | 1,175    | 1,130    | 1,227    |
| North Central Division .....  | 1,571    | 2,649    | 2,680    | 2,527    | 3,417    |
| Western Division .....        | 3,333    | 3,500    | 3,833    | 3,333    | 3,500    |

The above remarks concerning libraries apply also to scientific apparatus. The value of apparatus per institution in the several geographical divisions for the years 1891-92 to 1894-95 was as follows:

*Value of scientific apparatus per institution.*

| Division.                     | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|
| United States .....           | \$3,708  | \$5,107  | \$5,501  | \$6,075  |
| North Atlantic Division ..... | 17,197   | 19,106   | 20,596   | 24,730   |
| South Atlantic Division ..... | 1,614    | 1,137    | 2,039    | 2,228    |
| South Central Division .....  | 952      | 1,145    | 1,314    | 1,307    |
| North Central Division .....  | 951      | 5,740    | 5,741    | 6,024    |
| Western Division .....        | 5,333    | 8,333    | 10,500   | 10,500   |

The value of grounds and buildings increased from \$12,586,869 in 1891-92 to \$14,929,696 in 1894-95. The value per institution during the several years was as follows:

*Value of grounds and buildings per institution.*

| Division.                     | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|
| United States .....           | \$79,664 | \$92,039 | \$86,798 | \$91,593 |
| North Atlantic Division ..... | 204,525  | 216,920  | 222,415  | 231,237  |
| South Atlantic Division ..... | 55,494   | 72,498   | 64,856   | 74,610   |
| South Central Division .....  | 41,172   | 43,502   | 43,717   | 41,563   |
| North Central Division .....  | 78,337   | 82,542   | 75,931   | 90,633   |
| Western Division .....        | 158,407  | 216,000  | 201,000  | 201,000  |

The endowment funds of colleges for women were increased from \$3,954,489 in 1891-92 to \$5,172,767 in 1894-95, and the total income increased in the same period from \$2,778,588 to \$3,441,158.

The principal statistics concerning colleges for women are given, by States, in the following tables:

TABLE 1.—*Number of colleges for women and the number of professors and instructors reported from 1890-91 to 1894-95.*

| State.                     | Institutions. |          |          |          |          | Professors and instructors. |         |          |         |          |         |          |         |          |         |

## III.—SCHOOLS OF TECHNOLOGY.

The number of independent schools of technology increased from 40 in 1890-91 to 51 in 1894-95. This increase is due to the establishment in the newer States and in the Territories of colleges of agriculture and the mechanic arts, endowed by the acts of Congress of July 2, 1862, and August 30, 1890, and to the separation of similar colleges from other educational institutions in several of the older States. The statistics of these institutions for the years 1890-91 and 1891-92 are very incomplete and no attempt has been made to form totals for several of the geographical divisions and for the United States for those years. The statistics for the three years from 1892-93 to 1894-95 are, however, quite complete, as will be seen by an examination of the following tables.

The number of institutions of this class maintaining preparatory departments is quite small, the number of instructors in such departments during the past year being only 141. The number of instructors in collegiate departments increased from 909 in 1892-93 to 1,130 in 1894-95, and the entire number of instructors in all departments increased from 1,016 in 1892-93 to 1,217 in 1894-95. The average number of instructors per institution during the several years was as follows:

*Total number of instructors per institution.*

| Division.                    | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|------------------------------|----------|----------|----------|----------|----------|
| United States.....           | .....    | .....    | 21       | 24       | 24       |
| North Atlantic Division..... | 28       | 28       | 30       | 33       | 33       |
| South Atlantic Division..... | .....    | .....    | 15       | 18       | 17       |
| South Central Division.....  | 17       | .....    | 21       | 23       | 23       |
| North Central Division.....  | 24       | 23       | 23       | 27       | 27       |
| Western Division.....        | 9        | 11       | 11       | 11       | 15       |

*Collegiate instructors per institution.*

| Division.                    | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|------------------------------|----------|----------|----------|----------|----------|
| United States.....           | .....    | .....    | 19       | 21       | 22       |
| North Atlantic Division..... | 26       | 28       | 29       | 32       | 32       |
| South Atlantic Division..... | .....    | .....    | 15       | 17       | 17       |
| South Central Division.....  | 14       | .....    | 14       | 18       | 18       |
| North Central Division.....  | 23       | 22       | 22       | 21       | 26       |
| Western Division.....        | 9        | 9        | 8        | 9        | 13       |

From these statements it is seen that the number of instructors per institution has been steadily increasing from 1890-91 to the present time.

The total number of students increased from 11,957 in 1892-93 to 13,896 in 1894-95. The increase in the number of preparatory students is due to the fact that the recently established institutions in the newer States and in the Territories enroll the majority of their students in preparatory departments. As the public schools become able to pre-

pare students for college classes the number of preparatory students will decrease. The number of students of the various classes per institution are given in the following statements:

*Preparatory students per institution.*

| Division.                     | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|----------|
| United States .....           |          |          | 42       | 44       | 60       |
| North Atlantic Division ..... | 33       | 33       | 30       | 30       | 23       |
| South Atlantic Division ..... |          |          | 11       | 62       | 48       |
| South Central Division .....  |          |          | 76       | 81       | 136      |
| North Central Division .....  | 33       | 28       | 30       | 20       | 46       |
| Western Division .....        | 33       | 112      | 85       | 43       | 88       |

*College students per institution.*

| Division.                     | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|----------|
| United States .....           |          |          | 190      | 185      | 203      |
| North Atlantic Division ..... | 224      | 250      | 256      | 264      | 274      |
| South Atlantic Division ..... |          |          | 112      | 143      | 158      |
| South Central Division .....  |          |          | 127      | 133      | 183      |
| North Central Division .....  | 266      | 263      | 301      | 234      | 250      |
| Western Division .....        | 54       | 84       | 101      | 94       | 103      |

*Total number of students per institution.*

| Division.                     | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|----------|
| United States .....           |          |          | 249      | 266      | 272      |
| North Atlantic Division ..... | 231      | 288      | 292      | 296      | 301      |
| South Atlantic Division ..... |          |          | 124      | 207      | 201      |
| South Central Division .....  |          |          | 290      | 312      | 367      |
| North Central Division .....  | 317      | 318      | 340      | 365      | 311      |
| Western Division .....        | 116      | 196      | 184      | 138      | 197      |

As will be seen from the preceding tables, the institutions of the North Atlantic Division have the largest average number of college students to each institution, while the South Central Division has the largest number of students of all classes per institution. The largest number of graduate students are found in the North Central Division.

The number of volumes in libraries increased from 358,481 in 1891-92 to 446,681 in 1894-95. The average number of volumes per institution during the several years was as follows:

*Average number of volumes in libraries.*

| Division.                     | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|-------------------------------|----------|----------|----------|----------|
| United States .....           | 8, 147   | 8, 152   | 8, 211   | 8, 758   |
| North Atlantic Division ..... | 15, 593  | 15, 885  | 17, 102  | 18, 515  |
| South Atlantic Division ..... | 6, 158   | 5, 746   | 5, 337   | 5, 009   |
| South Central Division .....  | 3, 831   | 4, 203   | 4, 232   | 4, 542   |
| North Central Division .....  | 6, 979   | 7, 633   | 7, 423   | 8, 528   |
| Western Division .....        | 1, 787   | 1, 663   | 1, 949   | 2, 535   |

While there has been an actual increase each year in the number of volumes in libraries for each of the several divisions, it will be noticed that there has been a slight variation in the average number per institution in two of the divisions, viz, the South Atlantic and Western divisions. The decrease shown in these divisions is due to the establishment of new institutions whose libraries have not yet attained any considerable size. As many of these institutions are receiving an annually increasing appropriation from the United States Government, it is but natural to expect that the number of volumes in libraries, as well as the value of scientific apparatus, will be annually increased. The value of apparatus and the value of grounds and buildings per institution during the several years were as follows:

*Value of scientific apparatus per institution.*

| Division.                    | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
|------------------------------|----------|----------|----------|----------|
| United States.....           |          | \$51,552 | \$60,299 | \$64,548 |
| North Atlantic Division..... |          | 81,979   | 84,339   | 85,529   |
| South Atlantic Division..... |          | 17,640   | 16,385   | 16,375   |
| South Central Division.....  |          | 34,856   | 39,845   | 38,929   |
| North Central Division.....  |          | 83,828   | 115,103  | 133,720  |
| Western Division.....        | \$20,531 | 18,993   | 25,504   | 30,018   |

*Value of grounds and buildings per institution.*

| Division.                    | 1891-92. | 1892-93.  | 1893-94.  | 1894-95.  |
|------------------------------|----------|-----------|-----------|-----------|
| United States.....           |          | \$222,456 | \$228,728 | \$239,818 |
| North Atlantic Division..... |          | 406,715   | 420,293   | 461,926   |
| South Atlantic Division..... |          | 144,313   | 161,308   | 135,251   |
| South Central Division.....  |          | 139,316   | 149,658   | 184,674   |
| North Central Division.....  |          | 217,569   | 233,270   | 236,541   |
| Western Division.....        | \$70,440 | 77,173    | 69,087    | 88,501    |

The total value of grounds and buildings increased from \$10,687,870 in 1892-93 to \$12,230,734 in 1894-95. In the South Atlantic Division the value of grounds and buildings decreased from \$1,774,390 in 1893-94 to \$1,623,015 in 1894-95. This decrease is easily accounted for, as the buildings of the Clemson Agricultural College, South Carolina, were destroyed by fire.

The income of these institutions in 1894-95 amounted to \$3,798,791, which is \$524,060 less than the income for 1893-94. In this connection it should, however, be remembered that the Pennsylvania State College, with an income of over \$120,000, is not included in these statistics for the year 1894-95. The State appropriations to these institutions were less by \$255,000 than they were in the preceding year. This decrease occurred in all of the divisions except the South Atlantic

Division. The average income per institution from 1892-93 to 1894-95 was as follows:

*Average income per institution.*

| Division.                     | 1892-93.  | 1893-94.  | 1894-95.  |
|-------------------------------|-----------|-----------|-----------|
| United States .....           | \$83, 985 | \$83, 132 | \$74, 486 |
| North Atlantic Division ..... | 105, 795  | 120, 740  | 101, 459  |
| South Atlantic Division ..... | 78, 590   | 72, 915   | 71, 324   |
| South Central Division .....  | 68, 173   | 61, 793   | 55, 848   |
| North Central Division .....  | 77, 920   | 87, 027   | 75, 853   |
| Western Division .....        | 73, 217   | 48, 953   | 49, 830   |

The statistics, by States and Territories, of schools of technology are given in the following tables:

TABLE 1.—Number of schools of technology, with the number of students from 1890-91 to 1894-95.

| State or Territory.          | Institutions. |          |          |          |          | Students. |          |          |          |          |
|------------------------------|---------------|----------|----------|----------|----------|-----------|----------|----------|----------|----------|
|                              | 1890-91.      | 1891-92. | 1892-93. | 1893-94. | 1894-95. | 1890-91.  | 1891-92. | 1892-93. | 1893-94. | 1894-95. |
| United States .....          | 40            | 44       | 48       | 52       | 51       | .....     | .....    | 11, 959  | 13, 857  | 13, 896  |
